Standards & Implementations

CDISC open data standards have been developed collaboratively by global volunteers to improve the quality, efficiency and cost effectiveness of clinical research processes from protocol through analysis and reporting. In the diagram above, the top layers depict CDISC standards as they relate to fundamental clinical research processes, the middle layer represents standards for specific use cases involving therapeutic areas and healthcare interoperability, and the bottom layer represents semantics that support all CDISC standards. Click the appropriate blue buttons for details in each area.
