LAB Implementation

1 day course

Language: English

The LAB Data Model is a vendor-independent format used to store and interchange lab data between clinical lab vendors and sponsor companies. The LAB model is an approved HL7 model.

This one-day course consists of:

- The technical framework for LAB
- An in-depth understanding of the model structure
- An overview of the implementation modes
- Strategies for implementing LAB within your organization

Recommendation: Knowledge of clinical laboratory data is helpful to understanding the material presented.

Types of training available: [1]Private [2]
