Define-XML

1/2-day Course

Language: English

Course Objectives

Define-XML files are an essential component of a CDISC data submission to the US FDA. In the Define-XML training course you will learn:

- How to represent SDTM and ADaM metadata for datasets, variables and controlled terminology
- About Define-XML 2.0 capabilities for representing value or parameter level metadata
- How to provide traceability of submission data
- Strategies for managing common Define-XML implementation issues.

Prerequisites: Attendees should be familiar with the CDISC SDTM and ADaM specification and implementation guides. Prior XML experience is helpful but not required.
