

### **How to Become a CDISC Registered Solutions Provider (RSP)**

In order to become an RSP, a service provider must complete the registration form (see last page of this document) and submit the application and CVs of all staff listed in the application as technical consultants. The application package should be sent to Diana Harakeh at [dharakeh@cdisc.org](mailto:dharakeh@cdisc.org). The application package is then reviewed and approved by the CDISC Technical Leadership Committee. Applicants must meet the following minimum criteria:

- Adhere to the CDISC Code of Ethics
- Have a positive overall reputation for services in some aspect of clinical research
- Be involved in CDISC as a sponsor, member, benefactor, associate, or active team participant
- Demonstrate expertise in one or more CDISC models, as evidenced in at least one of the following ways:
  - Completion of advanced, model-related activities or applications such as controlled testing of CDISC models or demonstrations at events like an End to End demo.
  - Active participation on a modeling team for a period of at least one year with at least 75% attendance (as determined by team leaders), combined with a relevant and clearly defined service offering resulting from team participation.

The registration form must be updated annually. RSPs who are not in good standing or who have not kept registration forms up to date will be removed from the CDISC Registered Solution Providers list.

RSPs will need to demonstrate qualifications in each individual model area in their application. CVs should specifically mention CDISC expertise by model and how it was used in a work effort.

CDISC believes that all RSPs are especially qualified to provide consulting services for projects related to CDISC models; however, CDISC does not express any warranty or guarantee any products or services provided by RSPs. Contract details (e.g., cost, timing) should be negotiated directly between the RSP and the customer.
