The Clinical Data Interchange Standards Consortium (CDISC) and Texas eHealth Alliance cordially invite you to attend a free informational session:

“A Global Approach to Accelerating Medical Research”

Thursday, December 13, 2012  
8:00 AM – 11:45 (coffee and continental breakfast to be served)  
Texas Medical Association Building - Thompson Auditorium, Ground Floor  
401 West 15th Street, Austin, Texas 78701  

CDISC, a 501(c)(3) non-profit charitable organization is based in Austin, TX and has its new office in the Texas Medical Association Building. CDISC is an ISO-recognized standards developing organization that has collaborated with the U.S. HHS, HHS/ONC, FDA and numerous other organizations on a global basis to analyze research regulations and processes and to develop links with healthcare. Through these collaborations and the work of thousands of volunteers worldwide over the past 14 years, a set of enablers has emerged that can measurably accelerate the medical research process, from protocol through analysis and reporting.

This morning session outlines these enablers so that you can:  
• Appreciate the benefits of implementing them  
• Realize how you can improve your data quality  
• Recognize the value of streamlined workflow at clinical sites that wish to conduct research  
• Understand and communicate relevant business information that demonstrates their real world value

Who should come?  
• Anyone interested in improving medical research for the benefit of patients worldwide  
• Anyone interested in using EHRs for research  
• Anyone interested in standards for specific therapeutic areas

The CDISC Vision is informing patient care and safety through higher quality medical research.

Donations to help continue the work of CDISC are gratefully accepted.

Strength Through Collaboration
