Slashing my first mapping, five years later!

Shizuko Takahara
Kanazawa University

The sub-team “Learn from the ancestors who mapped recklessly” in CJUG SDTM team

Meet the Speaker

Shizuko Takahara

Title: Data Manager

Organization: Kanazawa University

A data manager for over 20 years in pharmaceutical companies and academia.

Disclaimer and Disclosures

- *Examples in this presentation are my current solutions, not the official CDISC view.*
- *No COI to disclose*

Agenda

1. Background / Today's Object
2. Lesson 1 – 4
 - Image of the way of thinking at the time when CDISC mapping was started
 - Lessons learned from those reflections
3. Conclusion

Background / Today's Object

Background

What I want to say before today's presentation:

- In 2017, five years ago, I conducted the first CDISC/SDTM mapping of investigator-initiated clinical trial data for lung cancer at Kanazawa University without outsourcing.
- I was the only person in charge of CDISC in my university, and there was no one to instruct me. Also, at that time, there were almost no Japanese materials on SDTM.
- I am a leader of “Learn from your ancestors who mapped recklessly” in CJUG/SDTM team. However, the contents are confidential, so I will present my own case instead.

Today's Object

What I want to say before today's presentation:

- Today's participants are professionals, and I think that only those who do not make such mistakes.
- I hope that it will be useful for your trainee education by knowing examples of how CDISC beginners thought and what mistakes they made.

Lesson 1

I just assigned the CRF image to the domain.

I just assigned the CRF image to the domain

Adverse Events	
Event Name	Headache
Start Date	1-Feb-2022
Grade	2
:	:

Demographics	
Birth Date	18-Jun-1988
Height	156 cm
Blood Type	O
:	:

Disposition	
<input type="checkbox"/>	Completed
<input type="checkbox"/>	Adverse Event
<input type="checkbox"/>	Pregnancy
:	:

Bad Case 1

Demographics	
Birth Date	18-Jun-1988
Height	156 cm
Blood Type	O
:	.

DM
Height?
Blood Type?

**Demographic
=DM**

**But DM domain
does not
contain them**

**If not,
they are SUPP?**

Bad Case 2

Medical History of the Breast Cancer

Diagnosis Date	22-Aug-2016
TNM at Diagnosis	T2N1M0
HER2 Score	3+
Operation Date	3-Oct-2016
Recurrence Date	22-Feb-2022
Relapsed Organ	Bone, Liver

I could not find the corresponding **domain** for the **current disease history**.

Is there no choice but to create a domain?

Since these are asking the doctor, they are QS in the expanded interpretation?

Asshat!!
So, do you assign all CRF items to QS?

Lesson 1

**Do not have an image
linking a CRF page to a domain.**

**You should have an image
linking each item to a domain.**

Examples for Bad Case 1

Demographics	
Birth Date	18-Jun-1988
Height	156 cm
Blood Type	O
:	.

DM

VS..."HEIGHT" is in VSTESTCD

LB..."ABO" is in LBTESTCD

Examples for Bad Case 2

Medical History of the Breast Cancer	
Diagnosis Date	22-Aug-2016
TNM at Diagnosis	T2N1M0
HER2 Score	3+
Operation Date	3-Oct-2016
Recurrence Date	22-Feb-2022
Metastatic Organ	Bone, Liver
:	:

- ← MH...MHTERM=Breast Cancer, MHSTDTC=
- ← RS...RSCAT=AJCC V7 RSTESTCD=AJCC101, RSOCCUR=
- ← MI...MITESTCD=HER2, MIOCCUR=
- ← PR...PRTRT=Breast cancer surgery, PRSTDTC=
- ← MH...MHTERM=Breast cancer recurrent, MHSTDTC=
- ← TU...TUTESTCD=DRCRLTLC, TUOCCUR=

~~Is there no choice but to create a domain?~~

~~Since these are asking the doctor, they are QS in the expanded interpretation.~~

Lesson 2

I was swayed by my image of the domains.

Bad Case 3

Disposition

- Completed
- Adverse Event
- Pregnancy

:

Bad Case 4

RECIST

Target	Lung R. S7	25mm
	Lung R. S8	7mm
	Liver S4	11mm
	-	-
	-	-
Target Response	PR	
Non-target Response	Non-CR/No SD	
New Region		

I thought TU, TR, RS were for RECIST only.

Medical History of the Breast Cancer

Metastatic Organ

Bone, Liver

TU...TUTESTCD=DRCRLTLC, TUOCCUR=

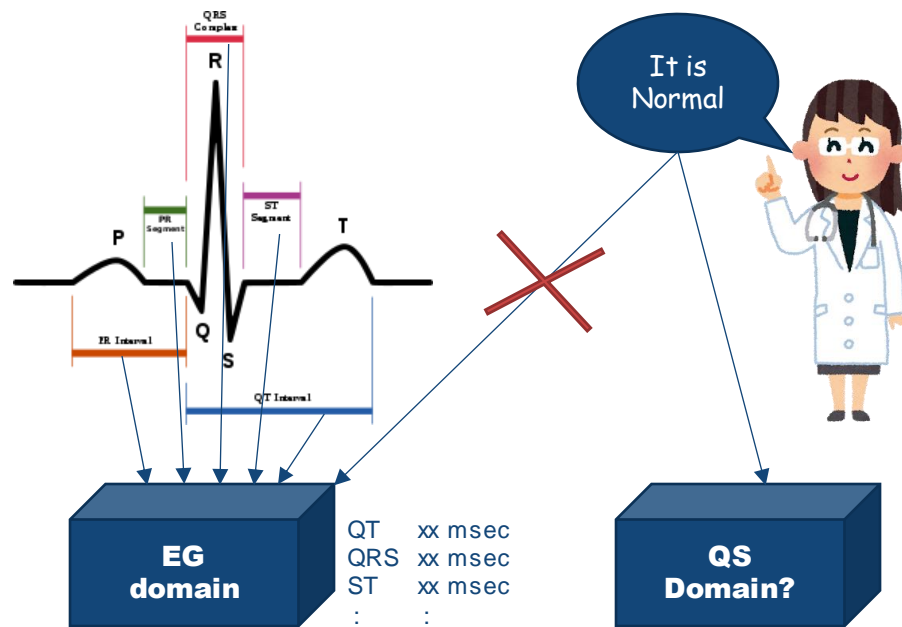

No!!
It is not
RECIST!

Bad Case 5

ECG	
Date	8-May-2021
Abnormal findings	N

EG domain is allowed only for each delta time measured by ECG

Lesson 2

Do not swayed by your image of the domains.

The worst thing you can do is just look at examples and think you understand.

It is important to grasp the original image of the domain.

It is necessary to read SDTMIG carefully and search all over Terminology.

Lesson 3

I thought that if I couldn't find anything in the domain, I should use SUPPQUAL.

Bad Case 1

Demographics	
Birth Date	18-Jun-1988
Height	156 cm
Blood Type	O
:	.

DM
Height?
Blood Type?

**Demographic
=DM**

**But DM domain
does not
contain them**

**If not,
they are SUPP?**

Lesson 3-1

Do not use
SUPPQUAL
easily!

Essentially, do not use SUPPQUAL.

- **Any measured items can be represented by one of the “Findings” domains.**
- **At first, you should look for the appropriate one on the xxTESTCD.**

Bad Case 6

Smoking Usage

- Never
- Former
- Current

SU domain
dose not have
it

If not,
it is SUPP?

Lesson 3-2

Do not use
SUPPQUAL
easily!

Essentially, do not use SUPPQUAL.

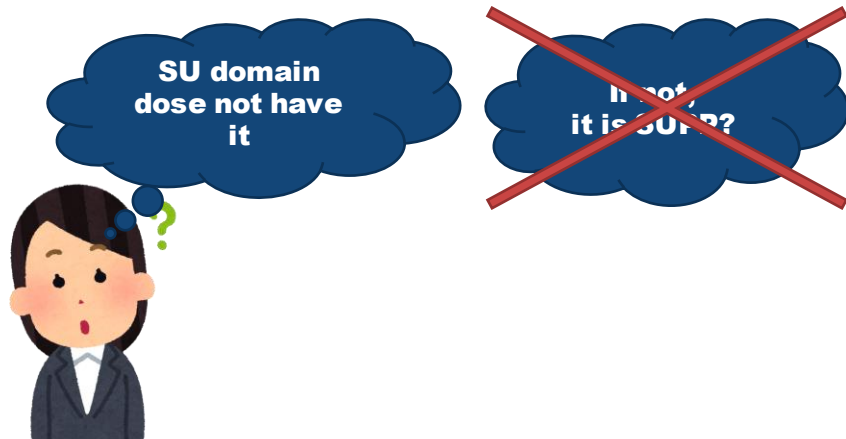

- **Not swayed by the item name.**
- **See the essence of the data.**
- **Make every effort before creating a SUPPQUAL.**

Example for Bad Case 6

Smoking Usage	
<input type="checkbox"/>	Never
<input type="checkbox"/>	Former
<input checked="" type="checkbox"/>	Current

SUPRESP	SUOCCUR	SUSTRF	SUENRF
Y	N		
Y	Y		PRIOR
Y	Y		ONGOING

Lesson 4

I thought they were “QS” because the doctor's judgments were human opinions.

Bad Case 2

Medical History of the Breast Cancer

Diagnosis Date	22-Aug-2016
TNM at Diagnosis	T2N1M0
HER2 Score	3+
Operation Date	3-Oct-2016
Recurrence Date	22-Feb-2022
Relapsed Organ	Bone, Liver

I could not find the corresponding domain for the current disease history.

Is there no choice but to create a domain?

Since these are asking the doctor, they are **QS** in the expanded interpretation?

Asshat!!
So, do you assign all CRF items to QS?

Bad Case 5

ECG	
Date	8-May-2021
Abnormal findings	N

EG domain is allowed only for each delta time measured by ECG

Lesson 4

“QS” is for questionnaires.

A findings domain that contains data for named, stand-alone instruments designed to provide an assessment of a concept.(SDTMIG V3.3)

Conclusions

Conclusions(1)

- If you explain the CRF heading and the domain in relation to each other, the image is easy to get excited, but it gets confused when it is divided into multiple domains.
- If only typical examples are described for the domain, the image of the domain will precede it and other uses will be missed.
- It is important to look for what is not there, rather than creating a suppqal if it is not there.
- Beginners may misunderstand the underlying intent of the domain, and you need to correct them with on-the-job training, etc.

Conclusions(2)

- The most important thing to do in order to create an SDTM, is to read the SDTMIG from end to end, and carefully search for the contents of the Controlled Terminology.
- Do not puff up your domains' image from a few information, for example, brief figures or SDTMIG examples.

Thank You!

May your trainees have a wonderful CDISC life!
