**Automation enabling standardization or Standards enabling automation?  
A preview of MOSAIC Biometrics, a tool for the AstraZeneca Output  
Standards**

Presented by Suman Nayak, Ph.D., Director, Specialist Programming, Data Automation, AstraZeneca

## Meet the Speaker

Suman Nayak

**Title:** Director, Specialist Programming

**Organization:** AstraZeneca

Suman holds a Ph.D. in Biomedical Engineering from Louisiana Tech University. She brings over 20 years of diverse experience in her current role in AstraZeneca as Director, Specialist Programming, spanning over leading and managing clinical data analysis related activities in the Pharmaceutical, Biotech and CRO industries, Biomedical research involving development of micro/nanoscale devices for interfacing with biology with particular emphasis on sensors and biomaterials, teaching and developing applications using computer languages such as C, C++ and Visual Basic. She has been with AstraZeneca since 2014 starting with the role of Global Programming Lead for Oncology drug products, leading business process improvements as a member of the Biometrics Operations Leadership Team before joining her current role in the Data Automation group within the Clinical Data & Insights (CDI) group. Outside of work, Suman enjoys anything sporty (her latest craze is swimming), cooking, gardening, and Lego but more importantly, spending quality time with her husband and daughter.

## Disclaimer and Disclosures

- *The views and opinions expressed in this presentation are those of the author(s) and do not necessarily reflect the official policy or position of CDISC.*
- *The author(s) have no real or apparent conflicts of interest to report.*

## Agenda

1. E2E Standardization and Automation – The Big Picture
2. AZ Output Standards - AZSOL
3. MOSAIC Biometrics – AZ tool for TLF automation based on machine readable metadata
4. AZSOL & MOSAIC Biometrics
  - Symbiosis
  - MOSAIC Biometrics Development Journey
5. Meet our team

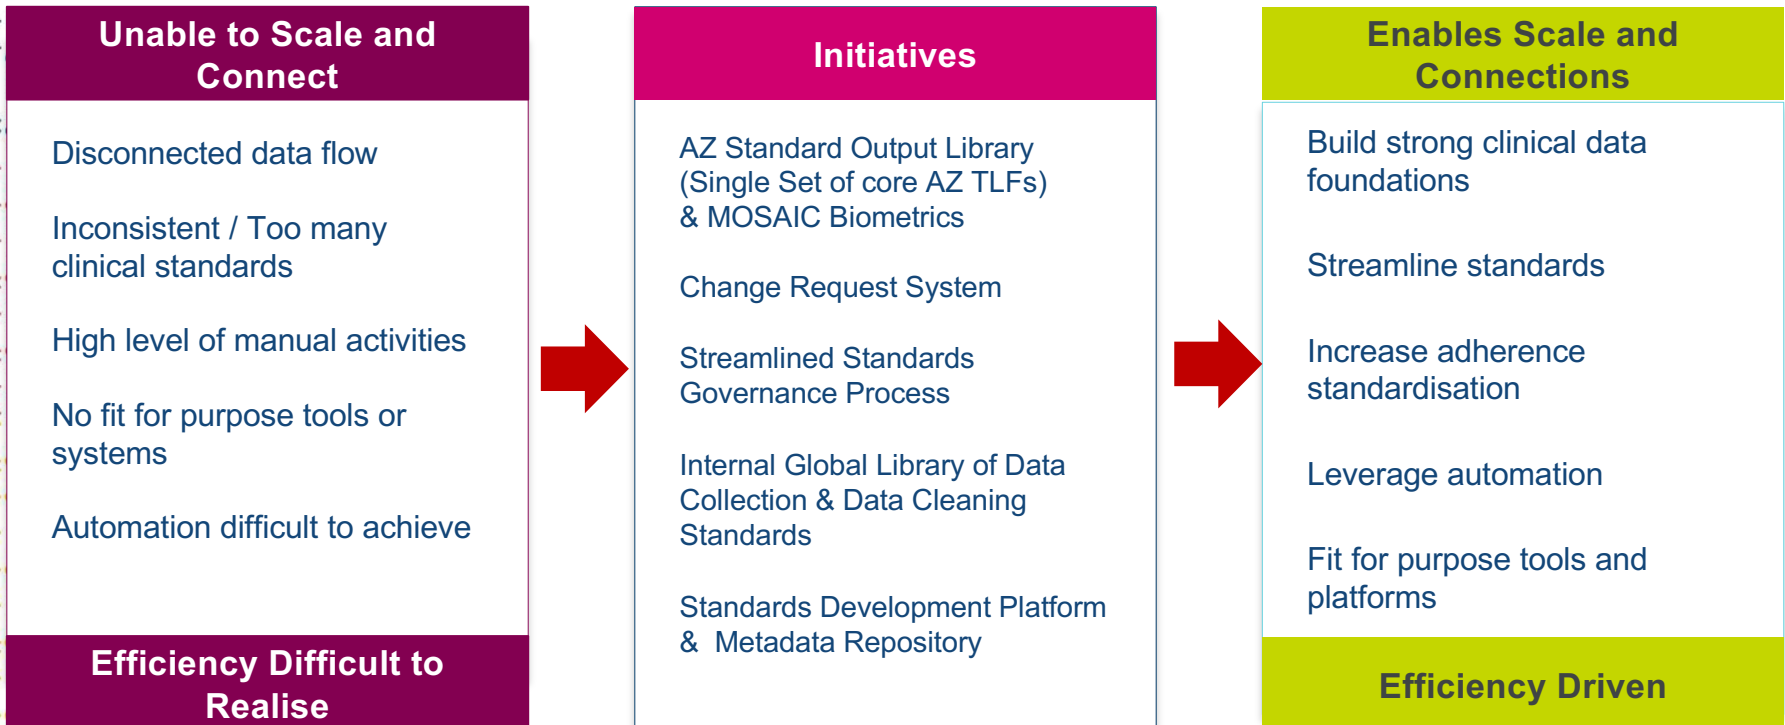

## E2E Standardization and Automation – the big picture

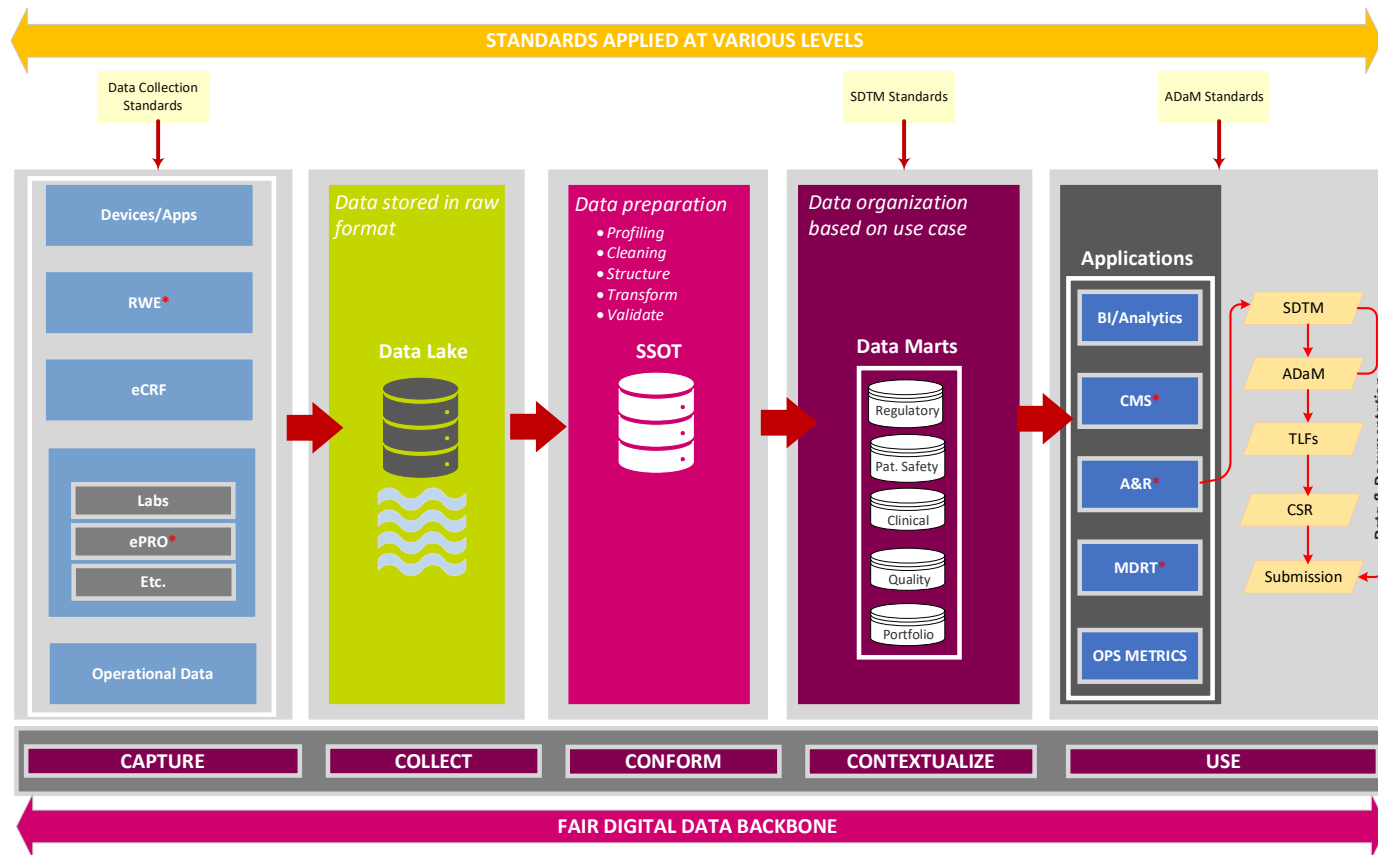

A brief overview of AstraZeneca's approach

# End-to-End Clinical Data Standards at AZ – Current State

# E2E Standardization and Automation – Future State

\*RWE: Real World Evidence, ePRO: Electronic Patient Reported Outcomes, CMS: Centralized Monitoring System, A&R: Analysis and Reporting, MDRT: Medical Data Review Tool

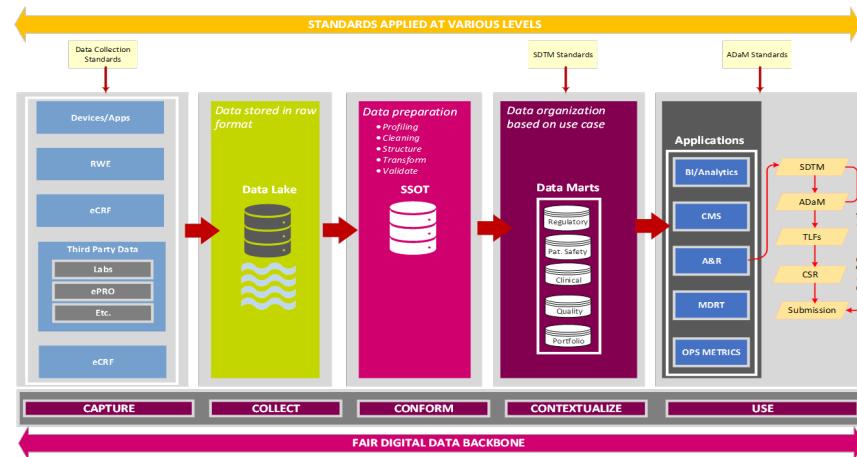

## E2E Standardization and Automation – AZ approach

- The AZ Redefining Clinical Data Flow (RCDF) Initiative, aims to overhaul our E2E clinical data flow
  - Right-time foundational data flow – sustainable and agile
  - Transformation of current approach to collection, access and management of patient data
  - New data sources and increasing volumes of data
  - Tools and systems maximizing use of clinical data. Efficient, and effective work
  - Overall goals: **simplify** ways of working, **improve** quality of deliverables, **increase** standardization and automation, **reduce time** to delivery.

**TLF standardization and automation are important components of the initiative**

- Standards Metadata repository
- TLF specification (mockshell) creation tool
- TLF standards adherence tracking
- TLF output code generation – automating output creation

## **AZ Output Standards - AZSOL**

Streamlined and simplified AZ TLF output standards

# AZ Standard Output Library (AZSOL)

AZ Standard Output library

- First step towards a single set of end-to-end clinical data standards
- Based on general principles and basic layouts
- Driving E2E standards by beginning with the end in mind
- Fully incorporated within MOSAIC Biometrics

STATISTICIANS

PROGRAMMERS

MEDICAL COMMS,  
CLINICAL SCIENTISTS,  
CLINICIANS

(PATIENT SAFETY)  
PHYSICIANS

MANAGERS (&  
SUPPLIERS)

## **MOSAIC Biometrics – AZ tool for TLF automation based on machine readable metadata**

Why do we need it?

# MOSAIC\* Biometrics

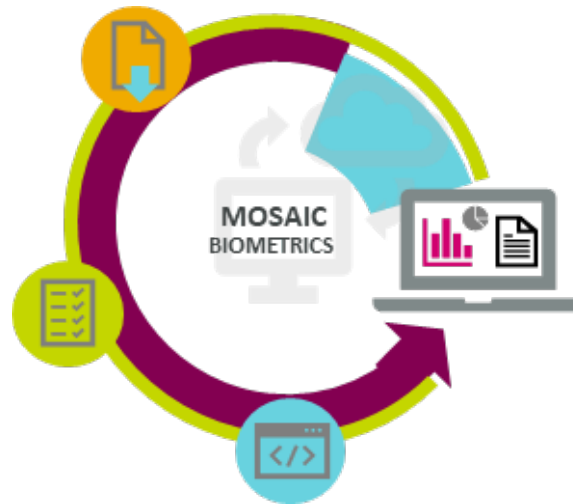

*A tool that automates the creation of electronic Tables, Listings & Figures (eTLFs) using AZSOL templates and principles*

## Ease-of-use

- Intuitive web-based interface makes it easy for users to build TLF shells directly in the tool

## Standards Adherence

- Improving consistency and compliance

## Automation

- Reducing or removing manual coding of outputs

## Flexibility/Control

- Designed in-house with enhanced integration with other AstraZeneca systems

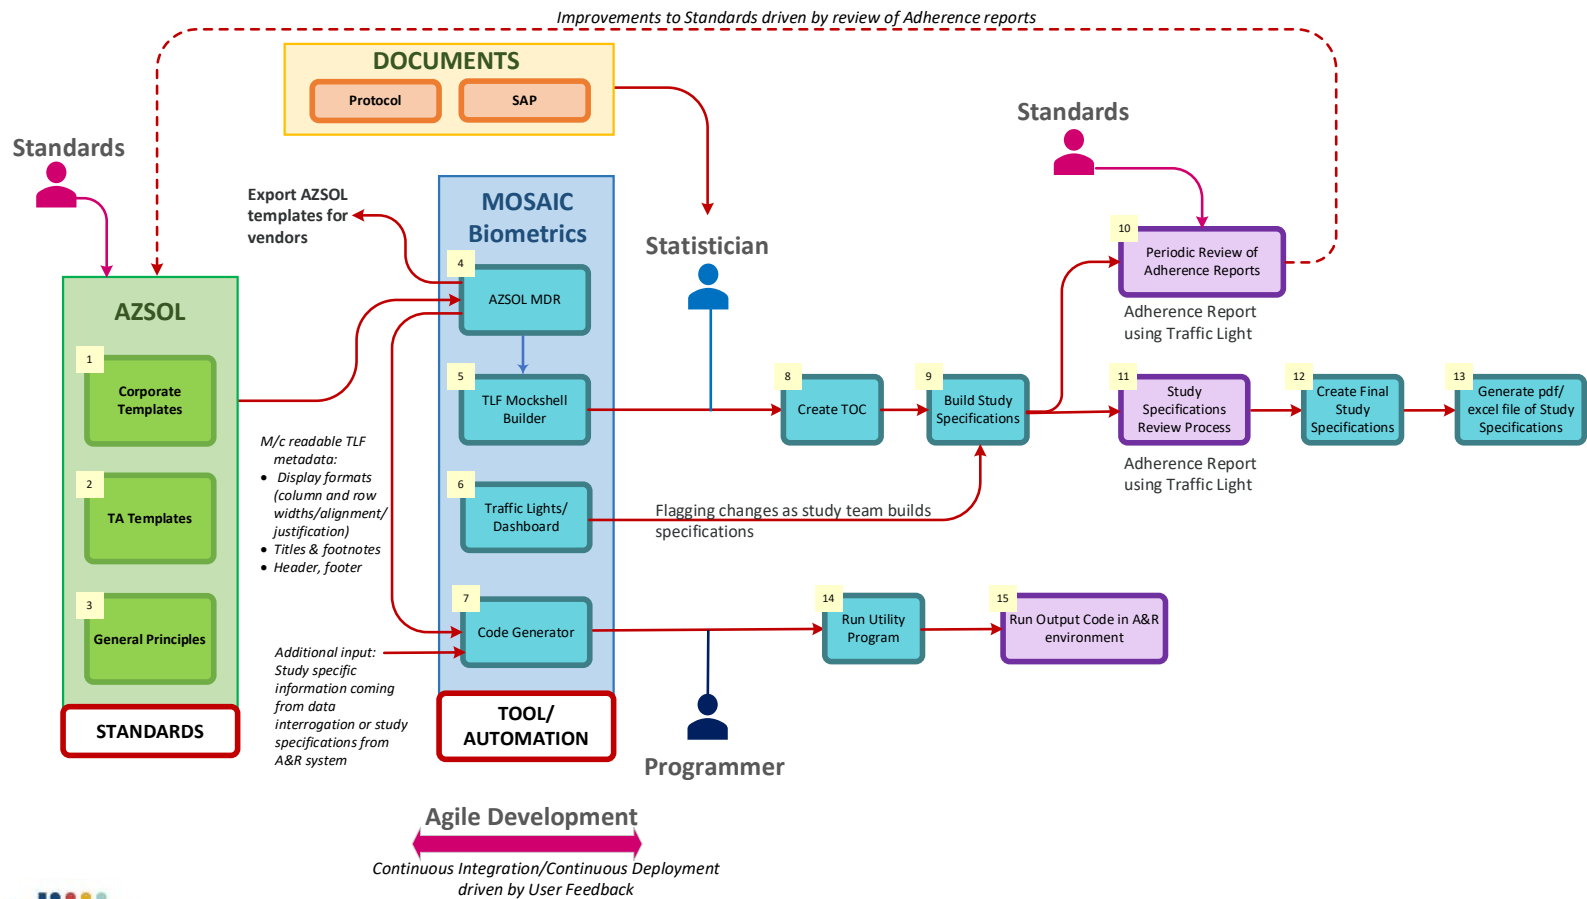

\*MOSAIC = MOckShell Standardization and Automated Integrated Code

## **AZSOL & MOSAIC Biometrics**

Automation enabling standardization or Standards enabling automation?

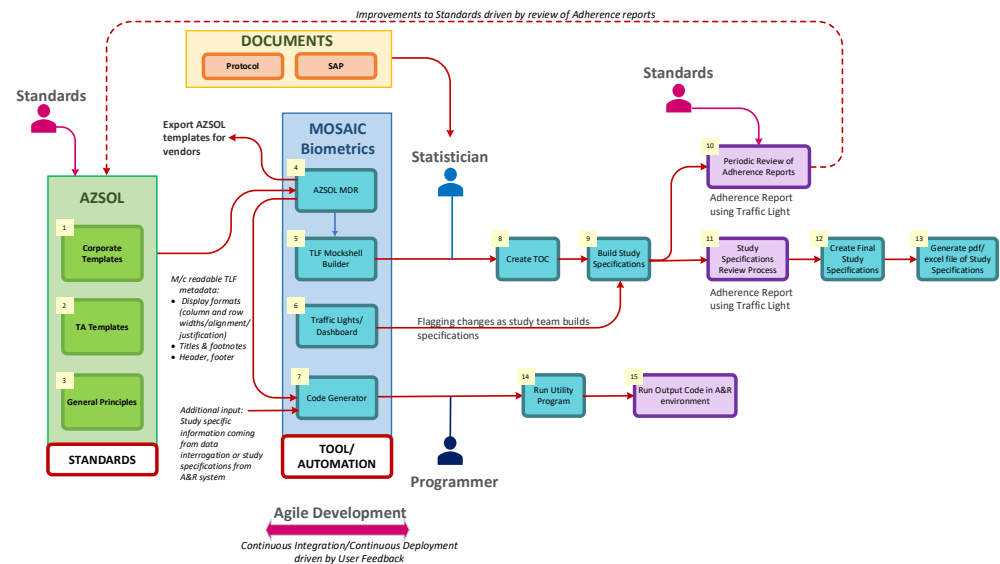

# AZSOL & MOSAIC Biometrics – Workflow, Roles & Deliverables

# AZSOL & MOSAIC Biometrics - Workflow

- Built for: Stats, Standards and Programmers
- **AZSOL** is the **content** (output standards/templates) and **MOSAIC Biometrics** is the **MDR** for output standards. Stored TLF metadata is used to **generate mockshells** and dynamically **generate code for TLFs**. In addition, the tool **tracks adherence to standards with metrics dashboards** to display key metrics related to standards adherence.
- The plan is to ramp up the ability of the system to produce code for safety and efficacy outputs by a certain % every year. The final goal is to be able to produce code for 80% safety and 20% efficacy outputs over the next few years.
- Developed in an Agile manner – Continuous Improvement/Continuous Development (CI/CD) based on user feedback and dashboard metrics.

# AZSOL & MOSAIC Biometrics - Symbiosis

## AZ Standard Output Library

### Simplification

- One AZ approach – single corporate identity
- General principles to be used for all TLF shells
- Layout for clarity and reduce programming
- Improved layout, reduced # of TLF templates
- Find what you need easily and apply to create study mock shells
- Improved Change Request (CR) process. Only necessary changes with a strong rationale are approved

### Drive automation

### Time/Cost savings

- Streamlined output and stricter decision making on CRs limit changes to those that add most value
- Cost savings with vendors & internally

Integrating tools

## AZ Standard Output Library within MOSAIC

### Automation

- Study specific information applied only once for a study
- Eliminates copying and pasting tables mock shells
- Footnotes are automatically added
- Ensures consistency across the mock shells for a study
- Improves consistency across studies/TAs
- Dynamic output code generation
- Improved quality
- Connects Change Request process

### Automatic adherence to standards

### Time/Cost savings

FTE savings related to both Safety and Efficacy TLF creation

*Study teams will gain most benefit when using the AZ Standard Output Library in MOSAIC Biometrics*

# MOSAIC Biometrics – Development Journey

## User driven tool – AZSOL Standard

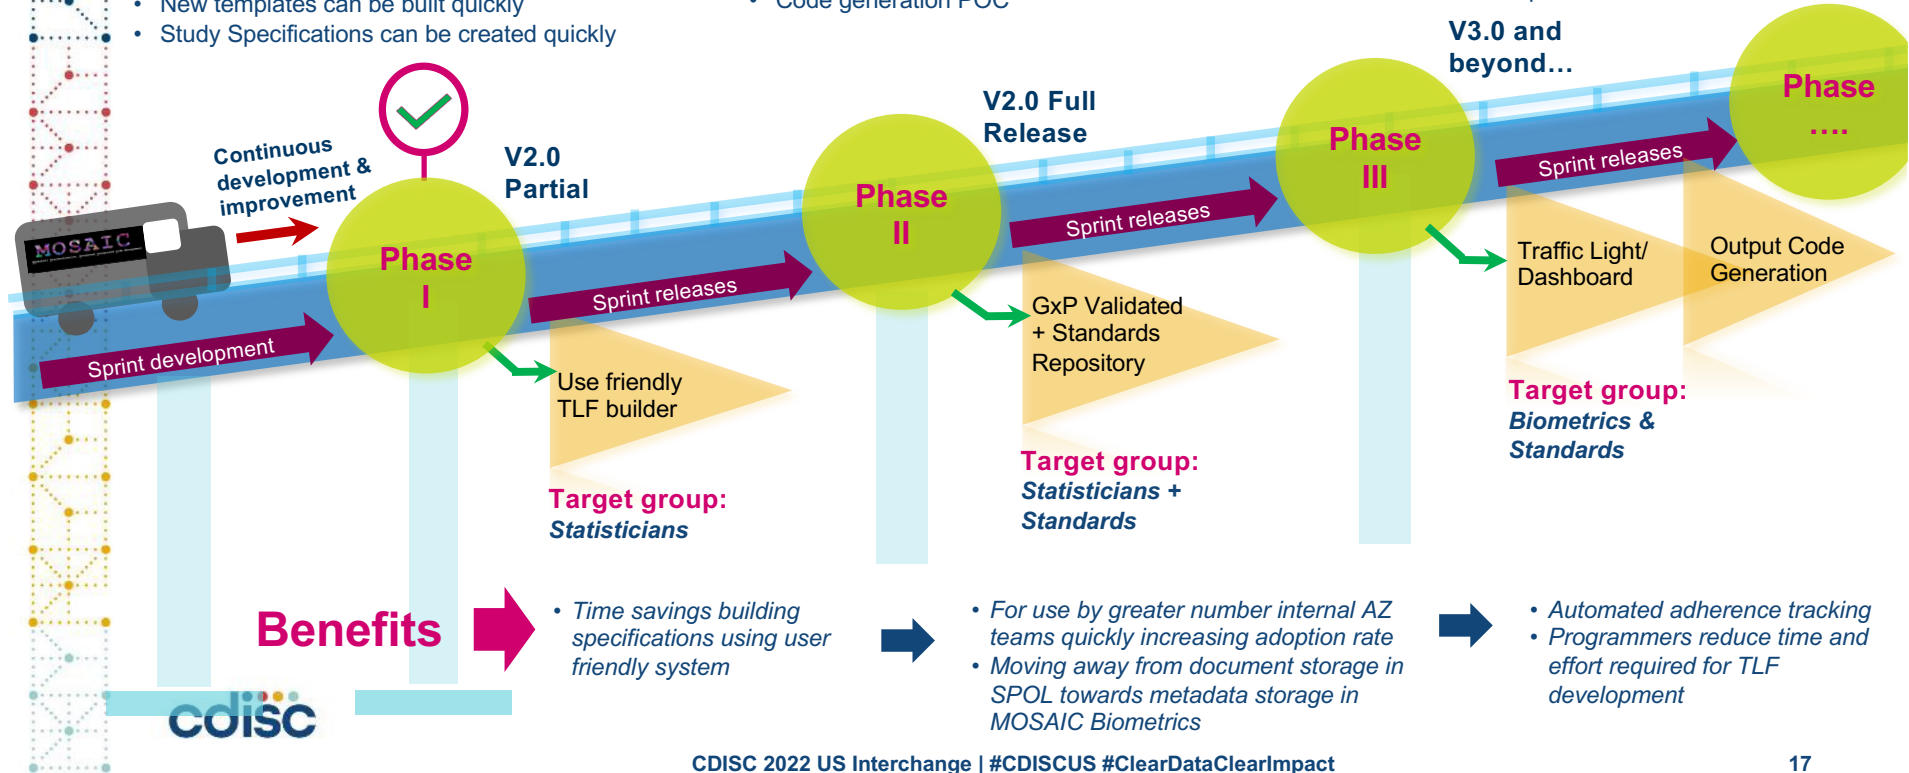

- Interactive tool where TLF specifications can be created using electronic CORP And TA templates
- Templates can be modified to meet study requirements
  - New templates can be built quickly
  - Study Specifications can be created quickly

## Validated and open

- GxP validated TLF Builder open to all internal AZ study teams
- Improvements to TLF builder
  - Standards repository features (version control)
  - Code generation POC

## Adherence to Standards, automated TLF output generation

- Traffic light system with dashboards, dynamic code generation
- Track adherence to AZSOL, drive efficient review
  - Dynamic code generated/automate creation of outputs
  - Use data to drive improvements

# Automation enabling standardization or Standards enabling automation?

Nothing truly valuable can be achieved except by the unselfish cooperation of many individuals  
~*Albert Einstein*
