Extending Biomedical Concepts to Analysis

Presented by Kirsten Walther Langendorf, Partner at data4knowledge

Meet the Speaker

Kirsten Walther Langendorf

Title: Partner

Organization: data4knowledge

Worked 20 years in the pharmaceutical industry within programming, IT implementation, process improvement, standards implementation, and statistics.

Advices and implements better solutions and processes for use re-use of data and metadata.

Is motivated and driven by implementation of linked-data, metadata-driven solutions, and automated end-2-end process for clinical data.

It should be simple and straight forward to use CDISC standards while working with clinical data.

Supports CDISC in the development of Biomedical Concepts.

Disclaimer and Disclosures

Agenda

1. Background
2. End-2-end data flow with BCs – extended to analysis
3. Derivation Concepts - examples
4. Proof-of-concept implementation
5. Summary

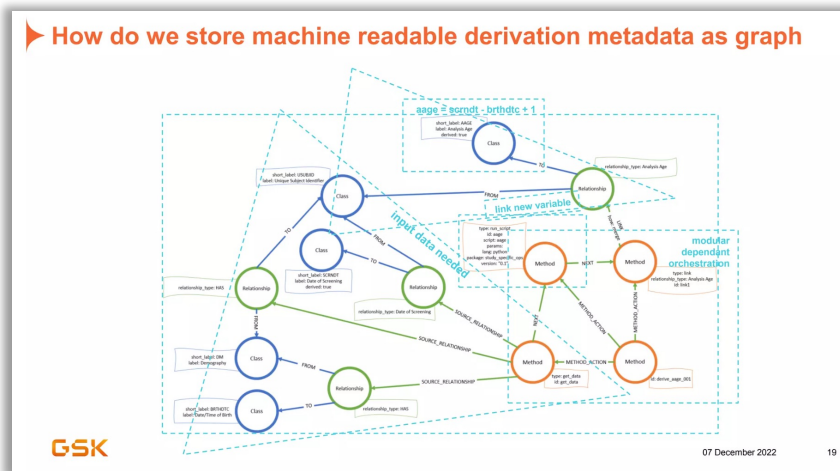

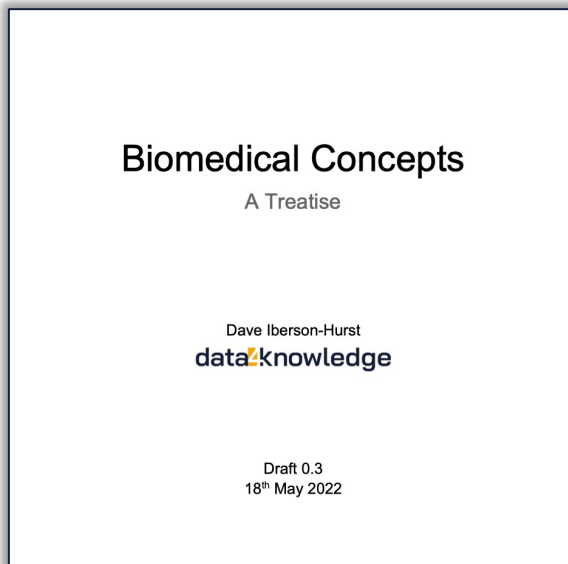

Background

The input and inspiration

Paper by Dave Ibersen-Hurst

Alexey Kuznetsov and Jorine Putter PhUSE EU 2022

End-2-end data flow

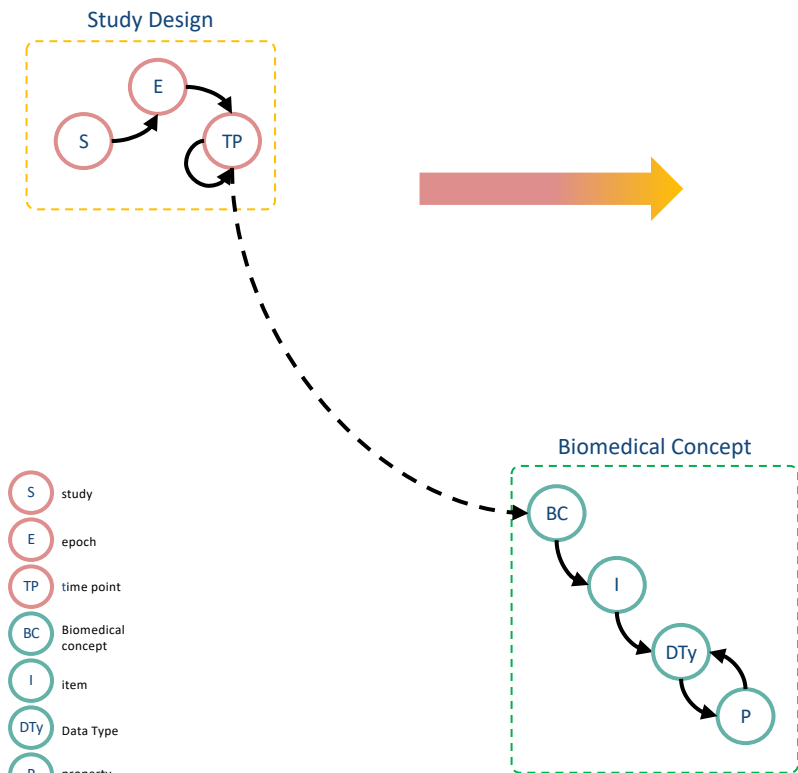

with Biomedical Concepts - extended to Analysis

The end-to-end view

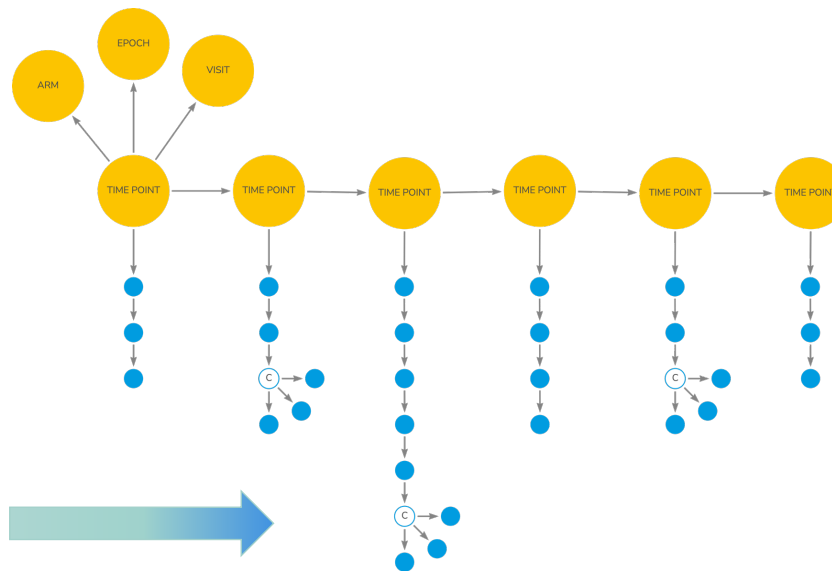

– also focus for CDISC Digital Data Flow

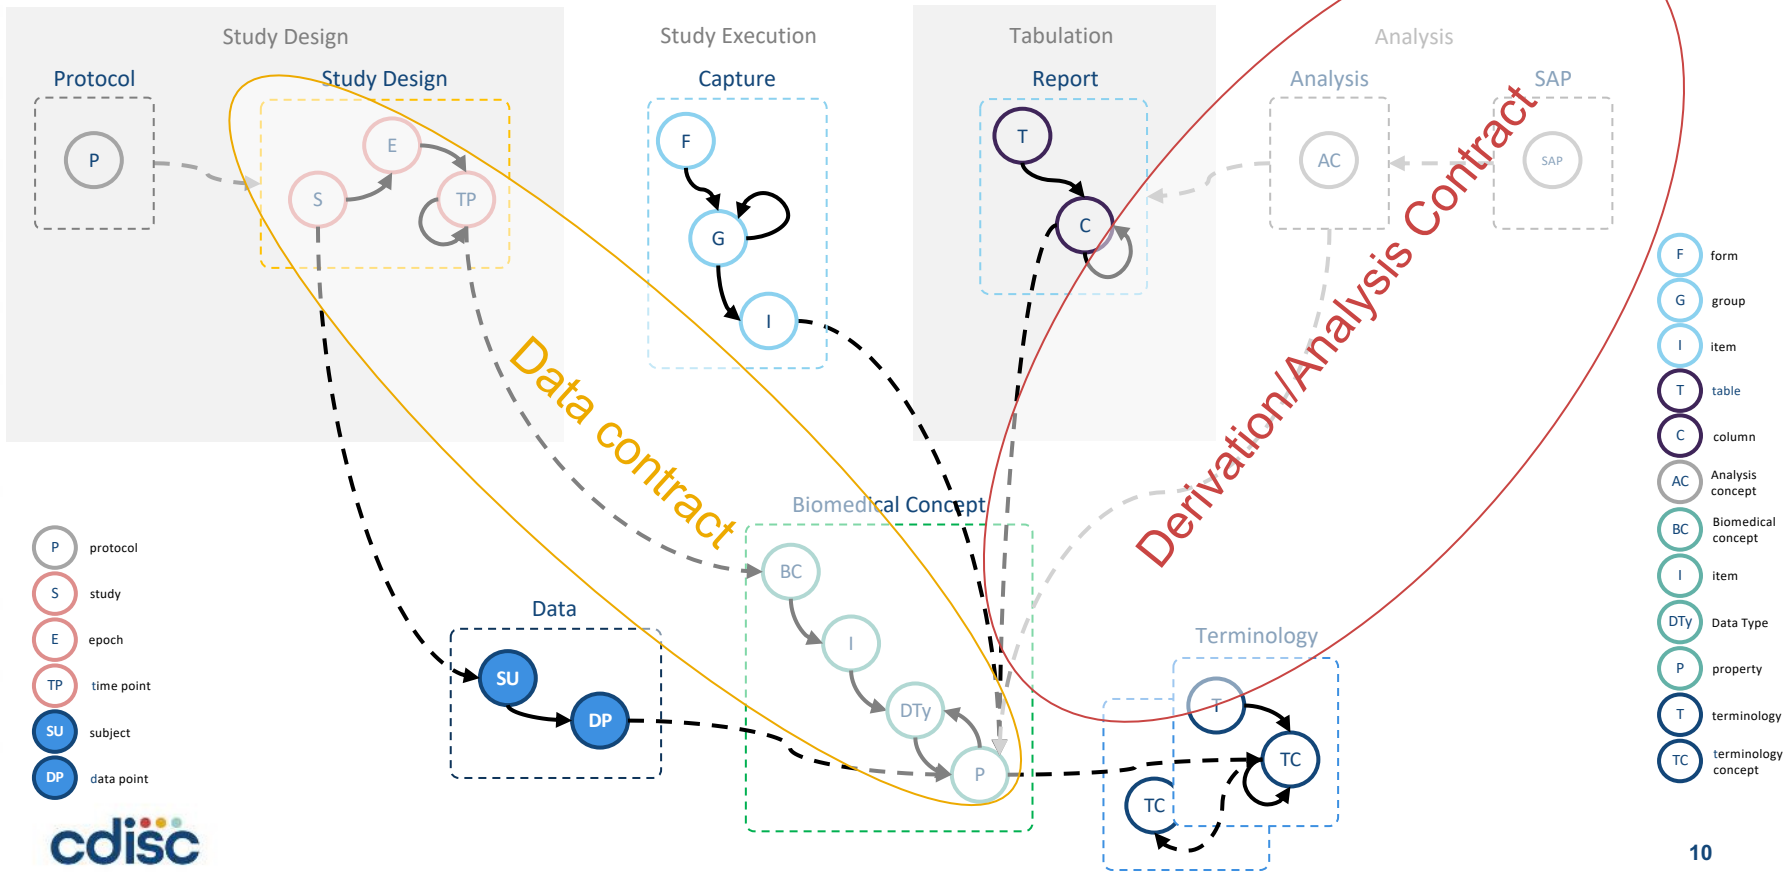

BC and the data contract

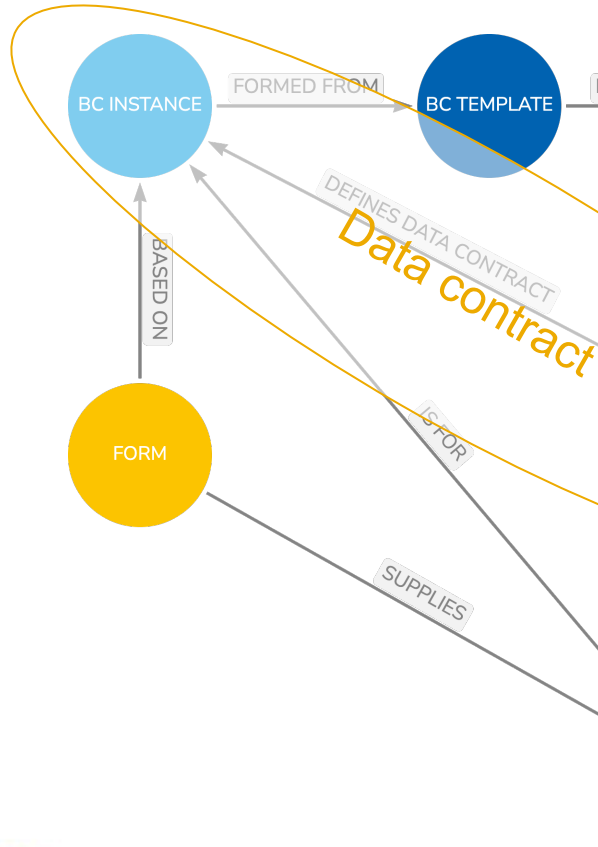

Data Contract

The end-to-end view – extending to Analysis

The data contract

Increasing Detail – Data Contract

Study Tocilizumab in Patients With Severe COVID-19 Pneumonia - WA42380
Owner, Version: 0.1.0

	Screening	Treatment	Treatment	Treatment	Treatment	Treatment	Treatment
Screening	Screening	Demographics					
Informed consent	X						
Inclusion/exclusion criteria	X						
Demographics	X						

Increasing Detail
The SoA to SoA+ expansion of detail. Detailing every data need results in a "data contract". Capture technology independent.

Form Recommendation
Systems can use the richness of definition to suggest forms for data capture builds

Demographics Age, Race, Sex

Demographics_2: Enrollment, Ethnicity, Sex, Age [0.6666666666666666]

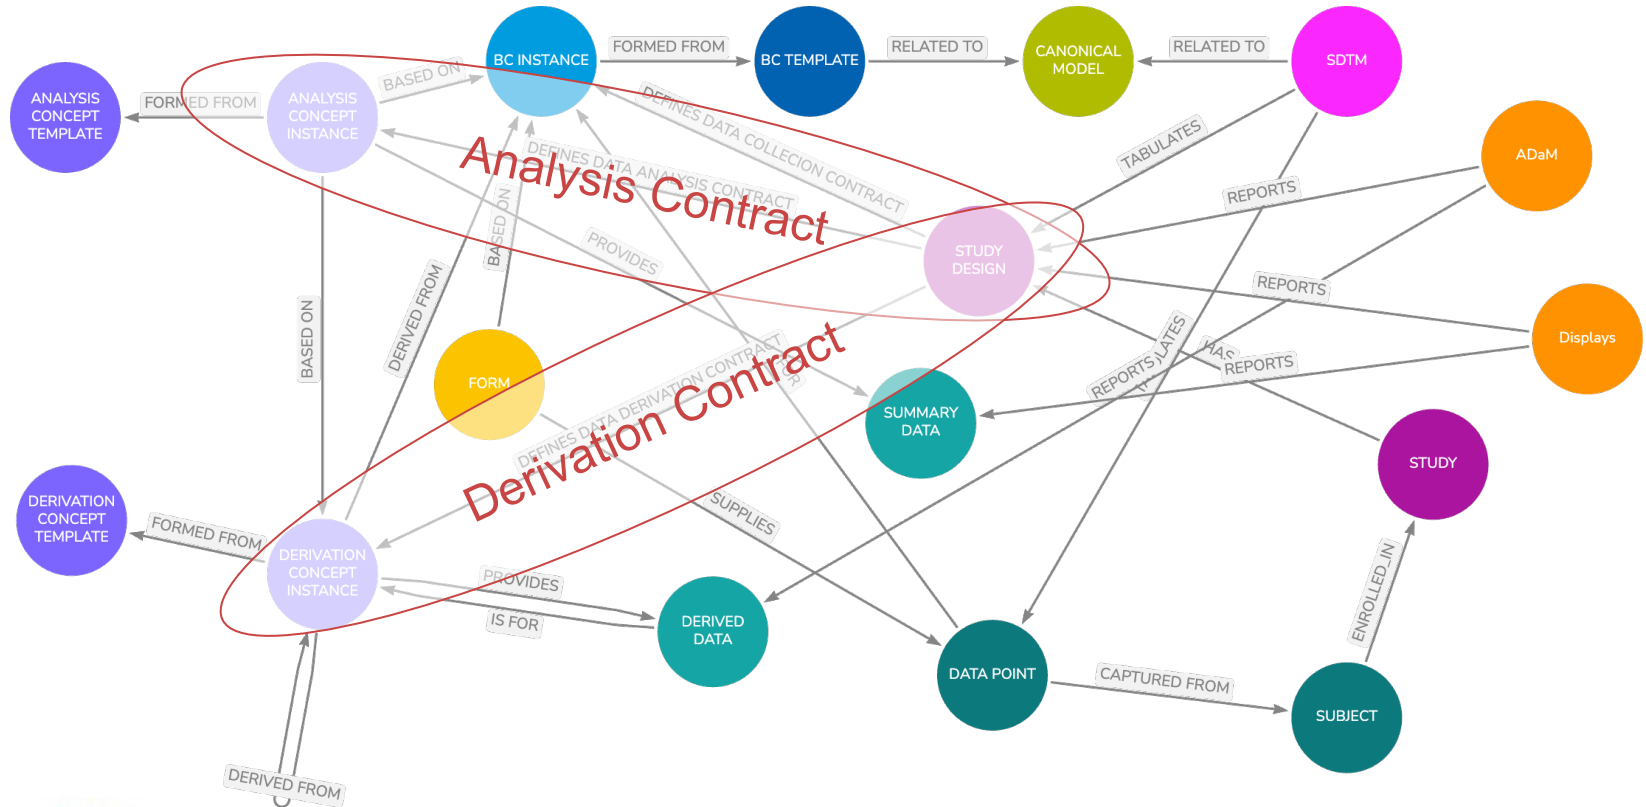

Demographics: Enrollment, Sex, Age [0.6666666666666666]

The data contract – extended to derivation/analysis

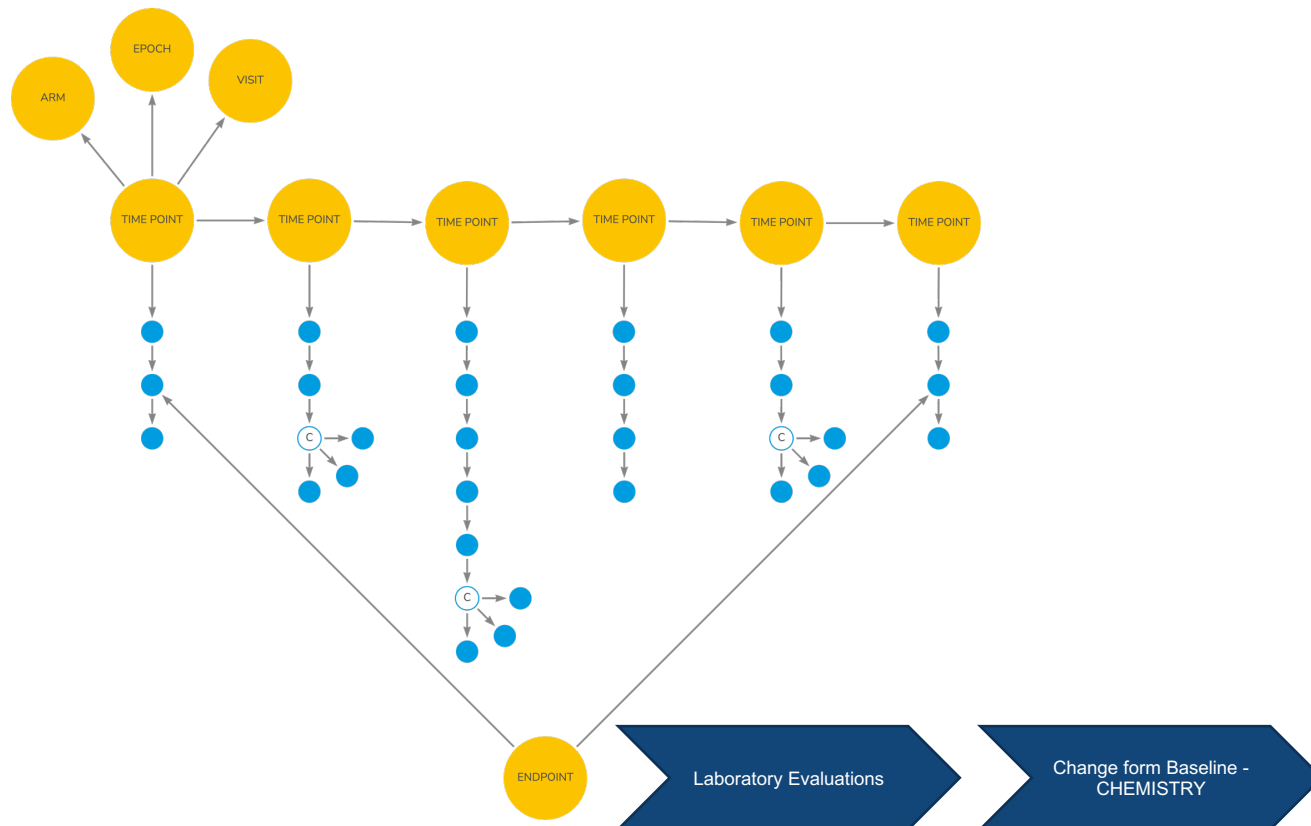

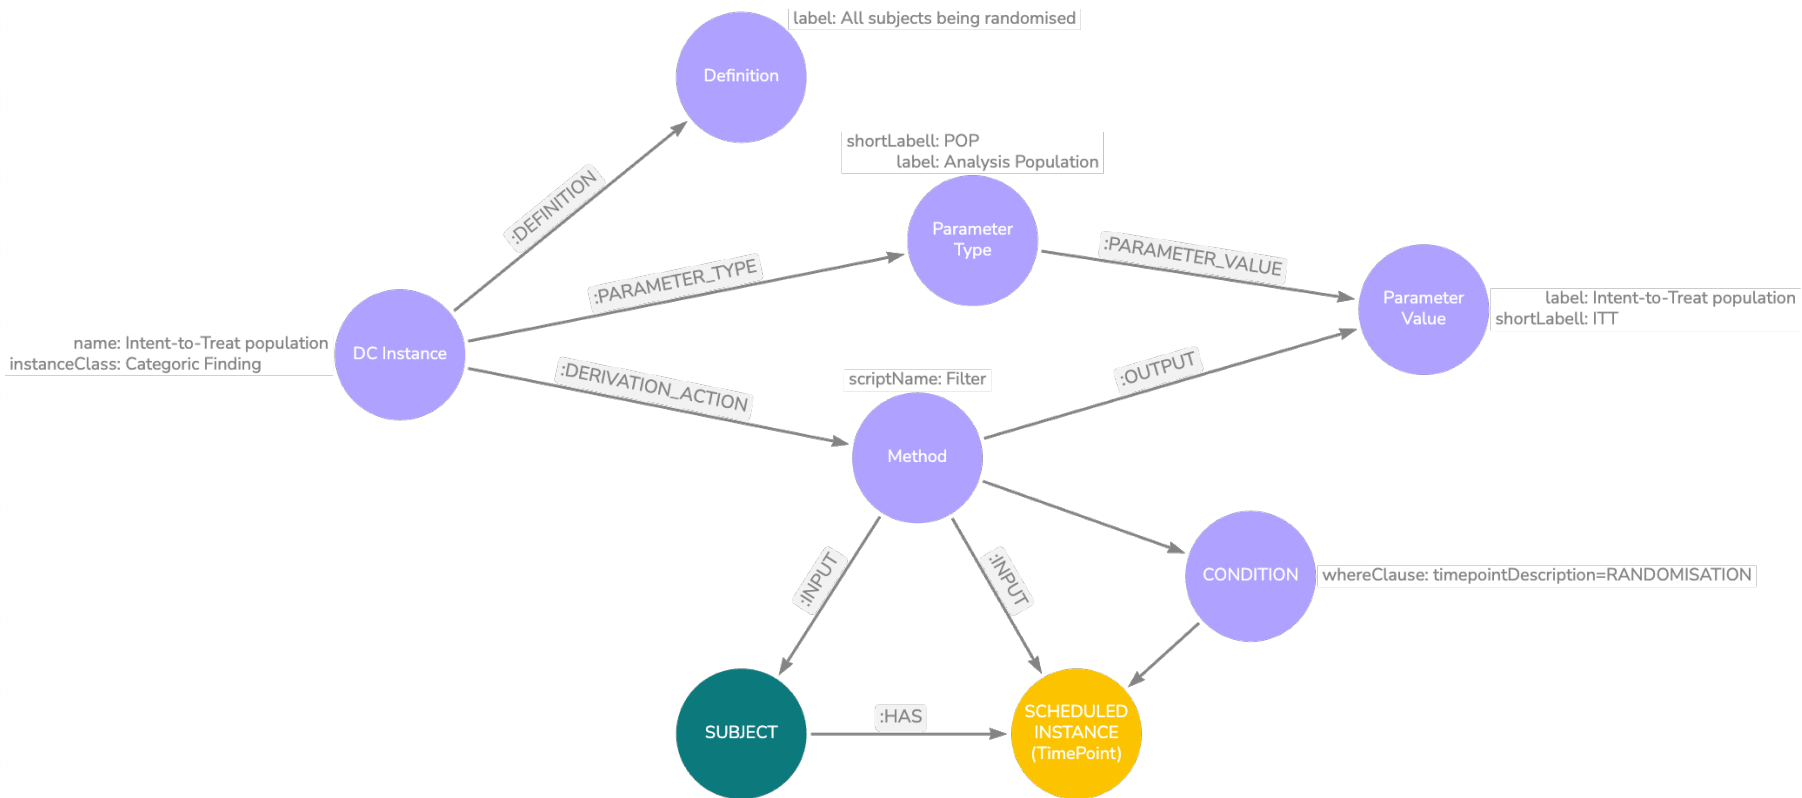

Derivation Concepts

Examples and some initial design

Change from Baseline in Chemistry Laboratory

Derivation concept – ITT Population

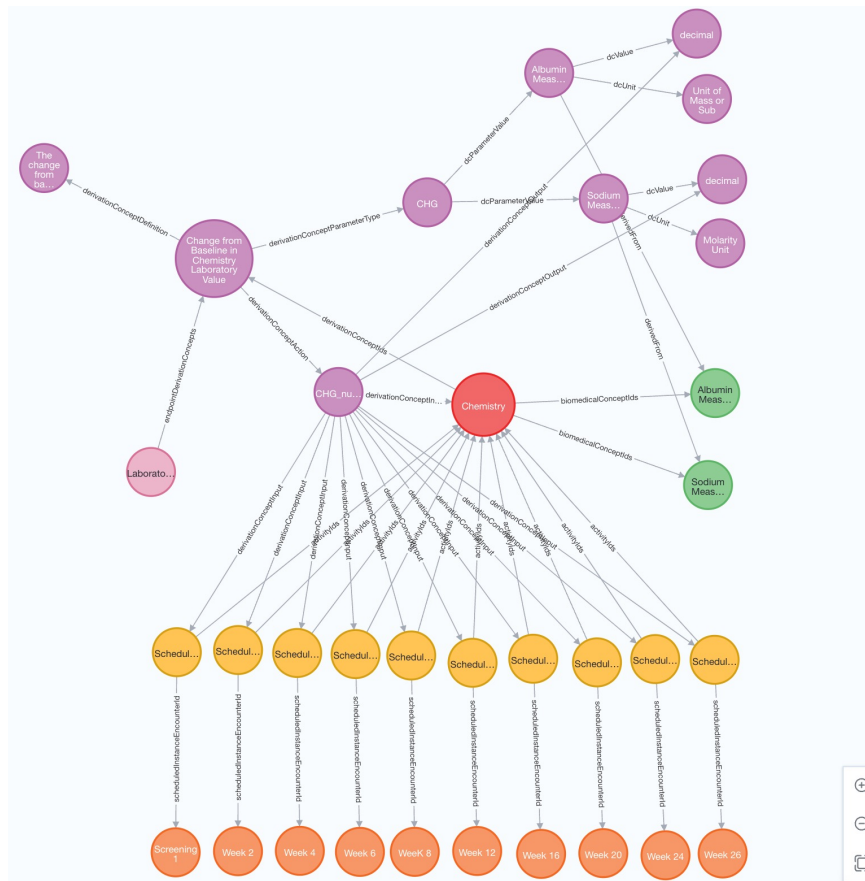

Proof of concept

Derivation examples in DDF model

-using CDISC pilot study

A derivation concept metadata into DDF model

Overview

Node labels

- * (34) **Activity (1)**
- BiomedicalConcept (2)**
- DerivationConcept (1)**
- DerivationDefinition (1)** **Encounter (10)**
- Endpoint (1)** **Method (1)** **ResultValue (2)**
- ParameterType (1)** **ParameterValue (2)**
- ScheduledActivityInstance (10)**
- ResultUnit (2)**

Relationship types

- * (48) **dcValue (2)** **derivedFrom (2)**
- dcUnit (2)** **derivationConceptInput (11)**
- activityIds (10)** **biomedicalConceptIds (2)**
- endpointDerivationConcepts (1)**
- derivationConceptIds (1)**
- derivationConceptDefinition (1)**
- scheduledInstanceEncounterId (10)**
- derivationConceptAction (1)**
- derivationConceptOutput (2)**
- derivationConceptParameterType (1)**
- dcParameterValue (2)**

Displaying 34 nodes, 80 relationships.

Data contract

- Library of Biomedical Concepts
- During study protocol setup the user selects Activities
- Next step is to detail which of the BCs (linked to Activity) is applicable for study

```
id$ //Data contract- Sodium and Albumin match(s:Study)-[:studyDesigns]→(sd:StudyDesign)-[:activities]→(a:Activity)←[:acti
```

Protocol	Study Design Name	Activity Name	BC Name	DC Name
"H2Q-MC-LZZT(c)"	"Study Design 1"	"Chemistry"	"Sodium Measurement"	"Change from Baseline in Chemistry Laboratory Values"
"H2Q-MC-LZZT(c)"	"Study Design 1"	"Chemistry"	"Albumin Measurement"	"Change from Baseline in Chemistry Laboratory Values"

Derivation Contract

- Library of Derivation Concepts – these are linked to library BC concept
- During study protocol the user can pick relevant DCs based on the Activities/BCs selected
- DCs can be linked to Endpoints

Derivation contract- Sodium and Albumin match(s:Study)-[:studyDesigns]→(sd:StudyDesign)-[:activities]→(a:Activity)←...

Protocol	Study Design Name	Activity Name	BC Name	DC Name	Parameter
"H2Q-MC-LZZT(c)"	"Study Design 1"	"Chemistry"	"Sodium Measurement"	"Change from Baseline in Chemistry Laboratory Values"	"Sodium Measurement (Molarity Unit)"
"H2Q-MC-LZZT(c)"	"Study Design 1"	"Chemistry"	"Albumin Measurement"	"Change from Baseline in Chemistry Laboratory Values"	"Albumin Measurement (Unit of Mass or Substance Concentration)"

Protocol	Objective	Endpoint	Activity Name	DC Name	Parameter
"H2Q-MC-LZZT(c)"	"To document the safety profile of the xanomeline TTS."	"Laboratory evaluations (Change from Baseline)"	"Chemistry"	"Change from Baseline in Chemistry Laboratory Values"	"Sodium Measurement (Molarity Unit)"
"H2Q-MC-LZZT(c)"	"To document the safety profile of the xanomeline TTS."	"Laboratory evaluations (Change from Baseline)"	"Chemistry"	"Change from Baseline in Chemistry Laboratory Values"	"Albumin Measurement (Unit of Mass or Substance Concentration)"

Data into DDF model

– executing the derivation concept

```
df= get_data('Sodium Measurement')
```

1 Get Data and metadata

	USUBJID	PARAM	ENCOUNTER_NAME	scheduledInstanceid	VALUE
1	"01-718-1150"	"Sodium Measurement"	"Screening 1"	"ScheduledActivityInstance_1"	138.0
2	"01-718-1150"	"Sodium Measurement"	"Week 12"	"ScheduledActivityInstance_11"	138.0
3	"01-718-1150"	"Sodium Measurement"	"Week 16"	"ScheduledActivityInstance_13"	139.0
4	"01-718-1150"	"Sodium Measurement"	"Week 20"	"ScheduledActivityInstance_15"	139.0
5	"01-718-1150"	"Sodium Measurement"	"Week 24"	"ScheduledActivityInstance_17"	140.0
6	"01-718-1150"	"Sodium Measurement"	"Week 26"	"ScheduledActivityInstance_18"	144.0

Data into DDF model

– executing the derivation concept

```
df= get_data('Sodium Measurement')  
df= CHG_num_find(df, 'Screening 1')
```

2 Calculate CHG

	USUBJID	PARAM	ENCOUNTER_NAME	scheduledInstanceId	VALUE	CHG
0	01-701-1015	Sodium Measurement	Screening 1	ScheduledActivityInstance_1	140.0	0.0
1	01-701-1015	Sodium Measurement	Week 12	ScheduledActivityInstance_11	139.0	-1.0
2	01-701-1015	Sodium Measurement	Week 16	ScheduledActivityInstance_13	141.0	1.0
3	01-701-1015	Sodium Measurement	Week 20	ScheduledActivityInstance_15	142.0	2.0
4	01-701-1015	Sodium Measurement	Week 24	ScheduledActivityInstance_17	140.0	0.0

Data into DDF model

– executing the derivation concept

```
df= get_data('Sodium Measurement')  
df= CHG_num_find(df,'Screening 1')  
save_derived_to_dc(df,'Sodium Measurement')
```

3 Save back to graph

Overview

Node labels

- * (39) Activity (1)
- DerivationConcept (1)
- DerivedDataPoint (10) Encounter (10)
- Method (1) ParameterType (1)
- ParameterValue (1) ResultValue (1)
- ScheduledActivityInstance (10)
- StudySubject (1) ResultUnit (1)
- BiomedicalConcept (1)

Relationship types

- * (70) dcValue (1) derivedFrom (1)
- subjectDerivedDataPoint (10)
- derivationConceptInput (11)
- activityIds (10)
- biomedicalConceptIds (1)
- derivationConceptIds (1)
- scheduledInstanceEncounterId (10)
- derivationConceptAction (1)
- derivationConceptParameterType (1)

Summary

Summary

- Presented an idea – not a final model!
 - More testing and alignment to DDF model is needed.
- To enable end-2-end metadata driven data flow we can introduce derivation concepts
- Introducing derivations concepts helps tracing how derived data was created and from where it was collected

Future work

- Further work needs to be done testing and modelling
- Need to cover the analysis concepts

data4knowledge

Thank You!
