The Development of CDISC Biomedical Concepts: Update and Next Steps

Presented by Jon Neville, Senior Director Standards Development, CDISC
Bess LeRoy, Head of Standards Innovation, CDISC

Meet the Speakers

Jon Neville

Title: Senior Director, Standards Development

Organization: CDISC

Jon Neville has 14 years' experience implementing and developing CDISC standards. He has led, co-led, or otherwise participated in many CDISC therapeutic-area data standards projects. Jon got his start in CDISC standards leading a legacy data conversion effort to create an integrated database of 24 Alzheimer's disease clinical trials. He has been participating on CDISC teams since 2010

Bess LeRoy

Title: Head of Standards Innovation

Organization: CDISC

Bess LeRoy is the Head of Standards Development at CDISC. Bess has been a CDISC team member since 2011. She has over 15 years' experience working in public health research and has held positions at the Framingham Heart Study, the Rotterdam Study, the Arizona Cancer Center, and the Critical Path Institute.

Agenda

1. Background
2. CDISC Biomedical Concepts
3. Use Cases
4. Looking Towards The Future

Background

What are biomedical concepts?

How Standards Have Been Historically Implemented

Controlled Terminology	CDISC Addressable Value	CDISC Element	CDISC Definition
Study Test Code	STUDY	Study Test Code	Reference used for relating the codes of the study to the study design.
Study Test Code	STUDY1	Study 1 Adult Population	A measurement of the adult 1 population in a study.
Study Test Code	STUDY2	Study 2 Adult Population	A measurement of the adult 2 population in a study.
Study Test Code	STUDY3	Study 3 Adult Population	A measurement of the adult 3 population in a study.
Study Test Code	STUDY4	Study 4 Adult Population	A measurement of the adult 4 population in a study.
Study Test Code	STUDY5	Study 5 Adult Population	A measurement of the adult 5 population in a study.
Study Test Code	STUDY6	Study 6 Adult Population	A measurement of the adult 6 population in a study.
Study Test Code	STUDY7	Study 7 Adult Population	A measurement of the adult 7 population in a study.
Study Test Code	STUDY8	Study 8 Adult Population	A measurement of the adult 8 population in a study.
Study Test Code	STUDY9	Study 9 Adult Population	A measurement of the adult 9 population in a study.
Study Test Code	STUDY10	Study 10 Adult Population	A measurement of the adult 10 population in a study.
Study Test Code	STUDY11	Study 11 Adult Population	A measurement of the adult 11 population in a study.
Study Test Code	STUDY12	Study 12 Adult Population	A measurement of the adult 12 population in a study.
Study Test Code	STUDY13	Study 13 Adult Population	A measurement of the adult 13 population in a study.
Study Test Code	STUDY14	Study 14 Adult Population	A measurement of the adult 14 population in a study.
Study Test Code	STUDY15	Study 15 Adult Population	A measurement of the adult 15 population in a study.
Study Test Code	STUDY16	Study 16 Adult Population	A measurement of the adult 16 population in a study.
Study Test Code	STUDY17	Study 17 Adult Population	A measurement of the adult 17 population in a study.
Study Test Code	STUDY18	Study 18 Adult Population	A measurement of the adult 18 population in a study.
Study Test Code	STUDY19	Study 19 Adult Population	A measurement of the adult 19 population in a study.
Study Test Code	STUDY20	Study 20 Adult Population	A measurement of the adult 20 population in a study.

Codeable Name	CDISC Abbreviation Name	CDISC Synonym(s)	CDISC Definition
StudyID Test Code	STUDYID	StudyID Test Code	A measurement of the study identifier for the study.
StudyID Test Code	DOMAIN	StudyID Test Code	A measurement of the domain abbreviation for the study.
StudyID Test Code	USUBJID	USUBJID Test Code	A measurement of the unique subject identifier for the study.
StudyID Test Code	VSEQ	VSEQ Test Code	A measurement of the sequence number for the study.
StudyID Test Code	VSTESTCD	VSTESTCD Test Code	A measurement of the vital signs test code for the study.
StudyID Test Code	VSTEST	VSTEST Test Code	A measurement of the vital signs test name for the study.
StudyID Test Code	VSPOS	VSPOS Test Code	A measurement of the vital signs position for the study.
StudyID Test Code	VSORRES	VSORRES Test Code	A measurement of the vital signs result for the study.
StudyID Test Code	VSORRESU	VSORRESU Test Code	A measurement of the vital signs result in standard format for the study.
StudyID Test Code	VSTSTRES	VSTSTRES Test Code	A measurement of the vital signs result in standard format for the study.
StudyID Test Code	VSTSTRESN	VSTSTRESN Test Code	A measurement of the vital signs result in standard format for the study.
StudyID Test Code	VSTSTRESU	VSTSTRESU Test Code	A measurement of the vital signs result in standard format for the study.
StudyID Test Code	VSREASND	VSREASND Test Code	A measurement of the vital signs result in standard format for the study.
StudyID Test Code	VSLOC	VSLOC Test Code	A measurement of the vital signs location for the study.
StudyID Test Code	VSLOBFL	VSLOBFL Test Code	A measurement of the vital signs location for the study.
StudyID Test Code	VISITNUM	VISITNUM Test Code	A measurement of the visit number for the study.
StudyID Test Code	VISIT	VISIT Test Code	A measurement of the visit name for the study.
StudyID Test Code	VISITDY	VISITDY Test Code	A measurement of the visit day for the study.
StudyID Test Code	VSJTC	VSJTC Test Code	A measurement of the vital signs test code for the study.
StudyID Test Code	VSDY	VSDY Test Code	A measurement of the vital signs test day for the study.

Controlled
Terminology

Controlled Terminology:
>35,000 terms in almost
1000 code lists

6.3.17 Vital Signs

VS - Description/Overview

A findings domain that contains measurements including but not limited to blood pressure, temperature, respiration, body surface area, body mass index, height and weight.

VS - Specification

vs.xpt, Vital Signs - Findings, Version 3.3. One record per vital sign measurement per time point per visit per subject. Tabulation:

Variable Name	Variable Label	Type	Controlled Term, Codelet or Format*	Role	CDISC Notes	Comp
STUDYID	Study Identifier	Char	Y	identifier	Unique identifier for a study.	Req
DOMAIN	Domain Abbreviation	Char	2S	identifier	Two-character abbreviation for the domain.	Req
USUBJID	Unique Subject Identifier	Char	Y	identifier	Identifier used to uniquely identify a subject across all studies for all applications or submissions involving the product.	Req
VSEQ	Sequence Number	Num	Y	identifier	Sequence number given to ensure uniqueness of subject records within a domain. May be any valid number.	Req
VSSRPID	Group ID	Char	Y	identifier	Used to tie together a block of related records in a single domain for a subject.	Perm
VSPRID	Sponsor-Defined Identifier	Char	Y	identifier	Sponsor-defined reference number. Perhaps prefixed on the "CD" or an explicit line identifier or defined in the sponsor's operational database.	Perm
VSTESTCD	Vital Signs Test Short Name	Char	Y	test	Short name of the measurement, test, or examination described in VSTEST. It can be used as a column name when converting a dataset from a vertical to a horizontal format. The value in VSTESTCD cannot be longer than 8 characters, nor can it start with a number (e.g., "1TEST" is not valid). VSTESTCD cannot contain characters other than letters, numbers, or underscores. Examples: "VSYSBP", "VSABP", "VSHT".	Req
VSTEST	Vital Signs Test Name	Char	Y	test	Validation name of the test or examination used to obtain the measurement of finding. The value in VSTEST cannot be longer than 40 characters. Examples: "Systolic Blood Pressure", "Diastolic Blood Pressure", "Body Mass Index".	Req
VVSAT	Category for Vital Signs	Char	Y	grouping	Used to define a category of related records.	Perm
VVSCAT	Subcategory for Vital Signs	Char	Y	grouping	A further categorization of a measurement or examination.	Perm
VVSPOS	Vital Signs Position of Subject	Char	Y	test	Position of the subject during a measurement or examination. Examples: "SUPINE", "STANDING", "SITTING".	Perm
VVSORRES	Result of Finding in Original Units	Char	Y	result	Result of the vital signs measurement as originally recorded on collection.	Exp
VVSORRESU	Original Units	Char	Y	result	Original units in which the data were collected. The "beat/min" for VSORRES. Examples: "W", "LIT".	Exp
VVSTSTRES	Character Result/Finding in Std Format	Char	Y	result	Standardized result value for all findings, copied or derived from VSORRES in a standard format or standard unit. VVSTSTRES should share all results of findings in character format. If results are numeric, they should also be shared in numeric format. VVSTSTRESN, for example, if a test has results NONE, NEG and NEGATIVE in VSORRES, and these results effectively have the same meaning, they could be represented in standard format as NONE.	Exp

Vital Signs Dataset

The Problem with This Approach

- Labor-intensive; requires extensive knowledge of standards documents
- Subject to interpretation (and therefore, *misinterpretation*)
- Can result in inconsistent implementation

The intense effort required is a barrier to standards adoption

How We Evolve: CDISC Library

- Electronically publish data standards as groups of linked metadata
- Define relationships between variables, associated terminology codelists, and linkages across standards
- ***CDISC 360 Piloted development of linked biomedical concept metadata to enable end to end automation***

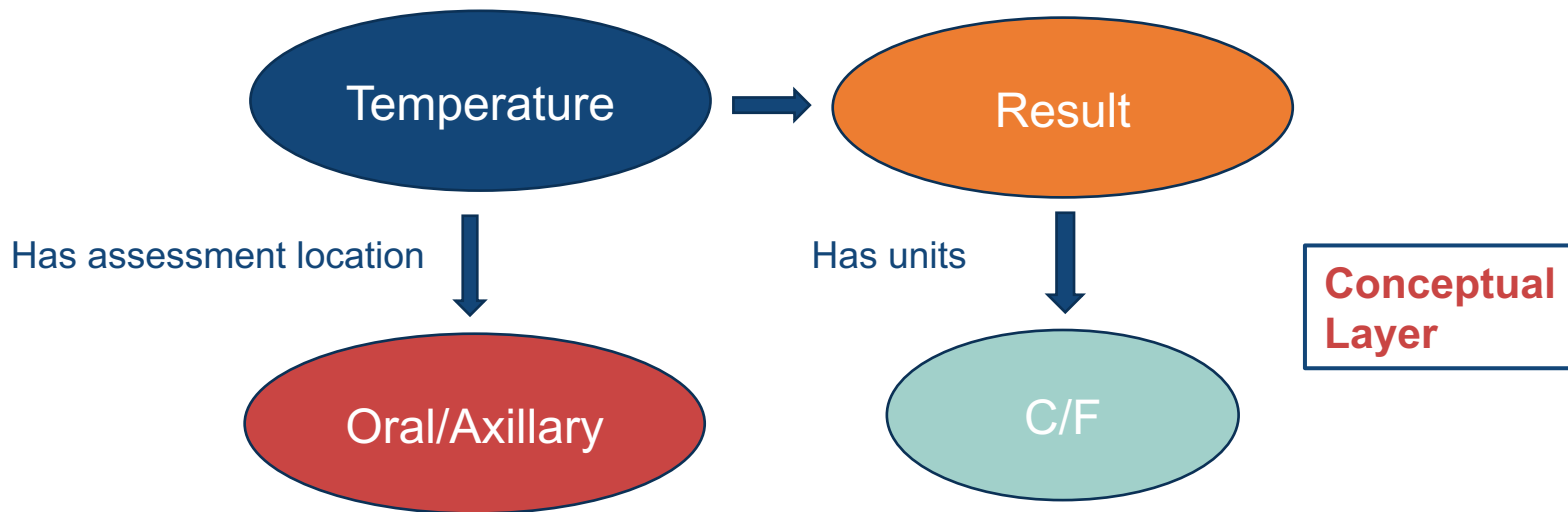

What is a Biomedical Concept (BC)?

ISO 11179 Definition: *A unit of knowledge created by a unique combination of characteristics*

- Independent of study
- Independent of a representation in any standard, but can be tethered to a standard

What Is a Biomedical Concept (BC)?

VSTEST	VSTESTCD	VSORRES	VSUNIT	VSLOC
Temperature	TEMP	101.3	F	ORAL

Implementation Layer

CDISC Biomedical Concepts

What are CDISC Biomedical Concepts?

A pragmatic, iterative approach to creating biomedical concepts with a focus on providing tangible value for the CDISC community

Key Objectives:

- Reduce barriers to operational implementation
- Reduce variability in standards implementations
- Increase metadata-driven automation

Key Components of CDISC BCs

Conceptual Layer

Implementation Layer

Logical Data Model

Conceptual Layer

- Rooted in NCI Hierarchy
- Consistent reference definitions provide consistent meaning across studies, all phases of development
- Data standard agnostic
- All indexed by C-Codes
- Provides for consistency in standards implementation

NCIthesaurus

Logical Data Model

- Concept specific value level metadata
- Add explicit relationships between variables
- Additional operational metadata, e.g., data type, format, etc.
- Creation of structured machine-readable YAML files validated with conformance rules
- Searchable and retrievable via CDISC Library APIs

Focus on your data. Let the standards come to YOU

You're most of the way there towards implementing CDISC for your data!

Initial Biomedical Concept Use Cases

*Retrieve a List of
Assessments for a Study*

*Publish BC content as
Define-XML document
including Value Level
Metadata*

Use Case 1

Support Study Design - SOA

Biomedical Concepts – Conceptual Layer for SOA

- BCs are retrievable standards agnostic assessments for a study SOA
- They include pointers to pre-configured SDTM and CDASH dataset specializations
- BC provide unambiguous information for EDC setup and dataset creation
- BCs are more than just a term, e.g., Heart Rate is collected as an integer and includes a term with allowable units, body positions, etc.
- Preconfigured BCs linked to CDASH and SDTM dataset specializations facilitate automation around study setup and SDTM delivery

Use Case 2: Define-XML – Value Level Metadata

Pre-configured Define-XML Building Blocks

- Practical implementation of BCs as at the SDTM implementation layer
- Pre-configured and ready to go value level metadata
- Templates to support consistent curation
- Fully opinionated and out of the box – allows for tweaks as needed
- Immediate benefit to data management and programming producing SDTM

BC Governance

- Light-weight CDISC curation and governance process
- 30-day Public Review
- Published quarterly
- Mechanism for community change requests

Draft governance process

Looking Towards the Future

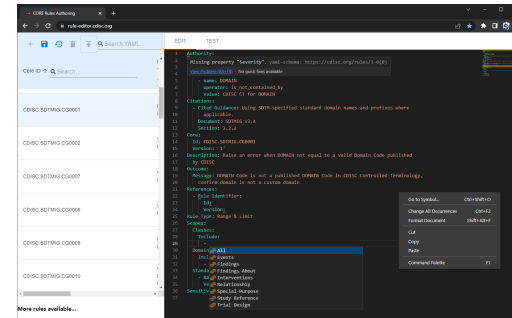

- Adding CDISC Library functionality
- Adding to conceptual and implementation layers

Adding Functionality to CDISC Library

- Searchable and Retrievable BCs via CDISC Library APIs and Data Standards Browser

- Web-based editor for BC authoring

Adding to Conceptual and Implementation Layers

- End to end standardization
 - Addition of Collection and Analysis Concepts
 - Derivations and transformations
- Use by Digital Data Flow to generate schedule of assessments
- Development of BCs for all new standards
- Community collaboration through the donation and curation of BCs

End to End Standardization: Expanding the Implementation Layer

Use of BCs in TransCelerate Digital Data Flow Initiative (DDF)

- The DDF initiative aims to modernize clinical trials by enabling a digital workflow to allow for the automated creation of study assets and configuration of study systems to support clinical trial execution.
- Use of BCs to support schedule of assessments: SEVERE COVID-19 PNEUMONIA (Roche)

Appendix 1
Schedule of Activities: Days 1 and 2

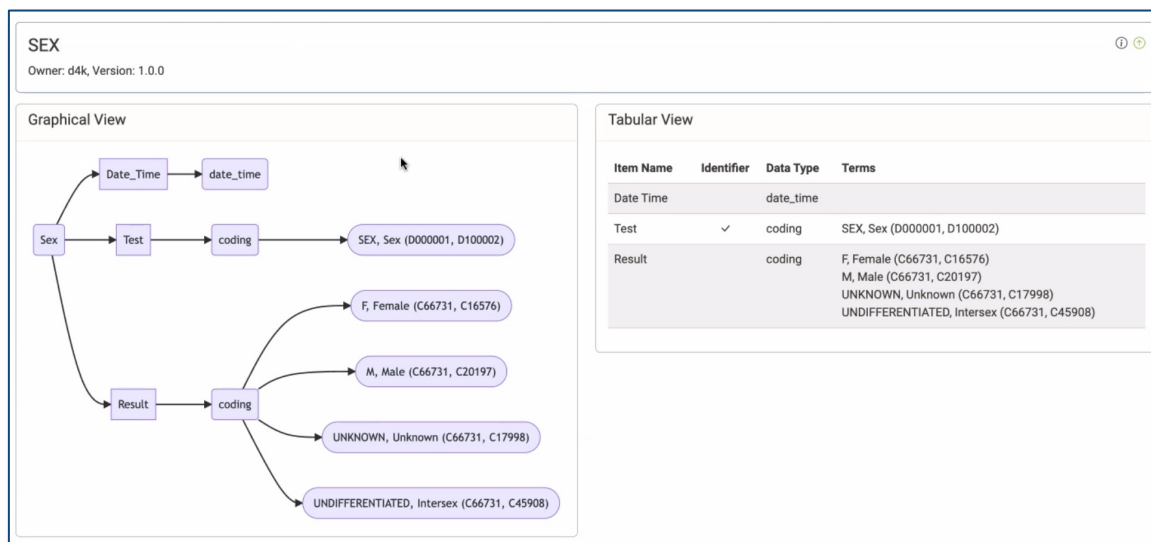

Study Day	Screening ^{a, b}	Baseline			
	-2 to 0	1	2	3	4
Time Post Initial Treatment (Assessment Window)		0 Pre-dose (-4 hrs)	15 min After end of infusion (+1 hr)	24 hrs (±4 hrs)	36 hrs (±4 hrs)

Using BCs to Build Schedule of Assessments

- Schedule of assessments consists of groupings of biomedical concepts

- Demographics

- Sex
- Date of Birth
- Age
- Race
- Ethnicity

Development of BCs for Therapeutic Areas

- Oncology Team authoring BCs using CDISC framework for Disease Response Criterion standards
- Tobacco Implementation Guide (TIG)

Additional Sources of BCs

- Donation of company created BCs
- Mining datasets
- Code Table mapping files
- LOINC to LB mapping
- NCI Thesaurus

Summary/Conclusions

- BCs provide consistent meaning around collected concepts
 - Everyone is speaking the same language
 - Conceptual layer details provide for easily browsable catalog to drill down into the data you need to collect
- BCs have the power to significantly lower barriers to implementation of standards
 - Start with the concepts. The standards implementation details come along with them
 - Sponsors no longer need to spend as much effort poring over documentation to match their data with implementation details
- BCs provide consistent implementation of standards

Thank You!

A special thank you to Lex Jansen and Linda Lander
