Agenda

1. SDTM creation

- Raw to SDTM (Process flow)
- Resources for aCRF/Mapping Specifications
- SDTM Conformance Checks
- Manual Check Examples

2. ADaM creation

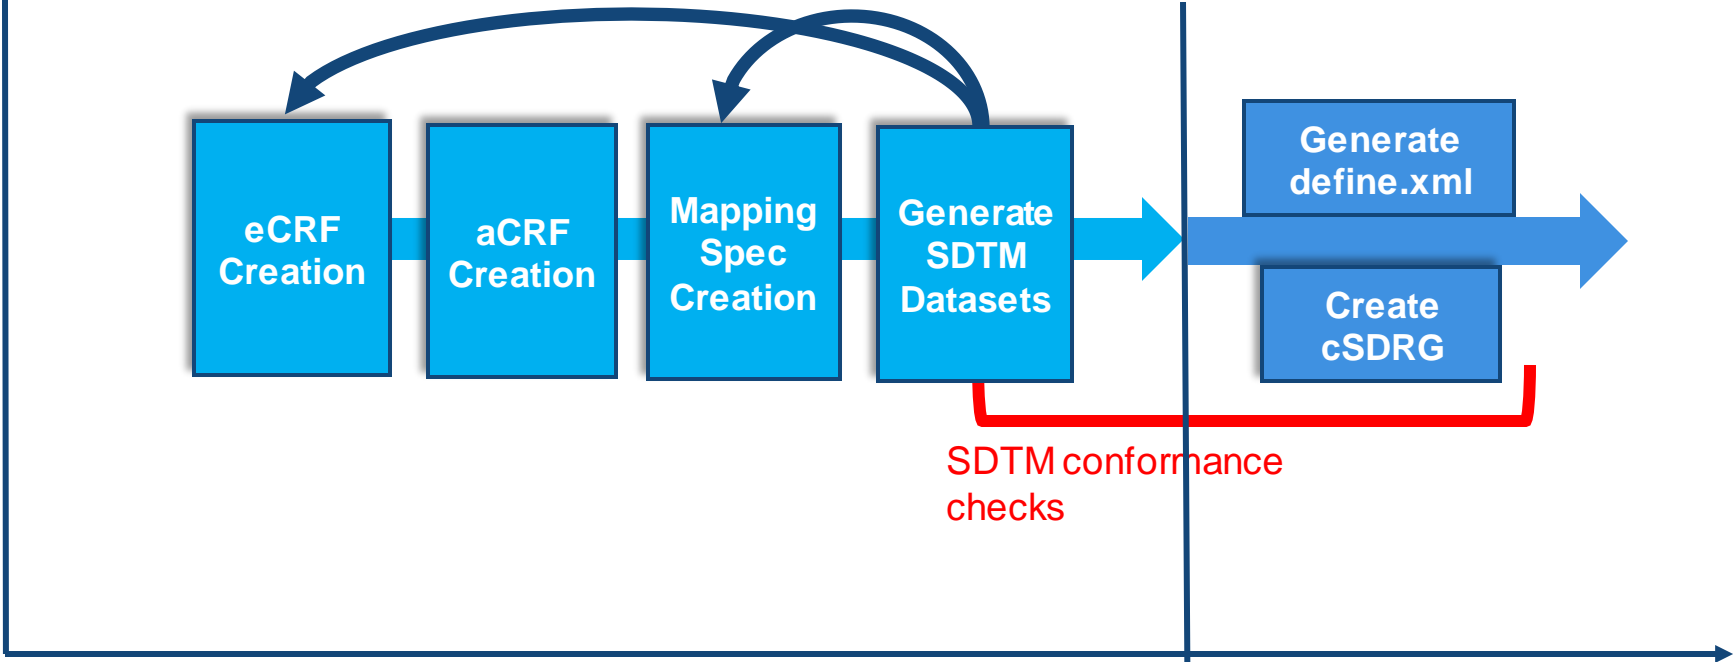

- SDTM to ADaM (Process flow)
- ADaM Conformance Checks
- Manual Check Examples

SDTM Creation

From Raw to Standardized

General Process Flow

Protocol created

Database Lock (DBL)

eCRF Creation

	<input type="text"/>		<input type="text"/>				
	Protocol	Site Number	Subject Number				

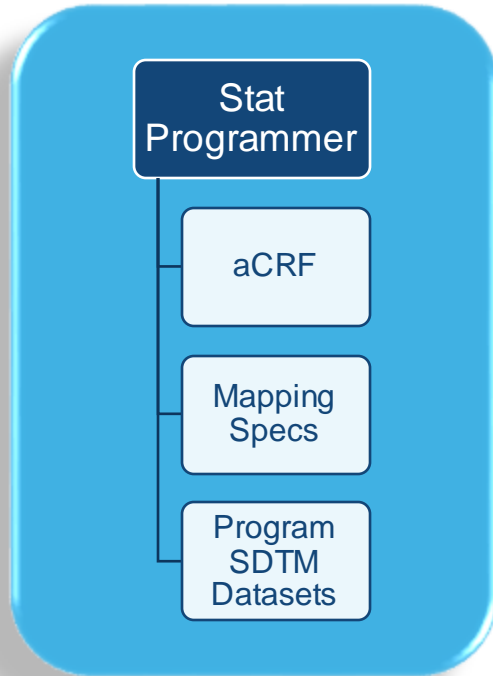

Form RP - Reproductive System Findings			
1 RP - Reproductive System Findings			
1.1	Was a reproductive system evaluation performed?	<input type="radio"/> No <input type="radio"/> Yes	RPPERF
1.2	Reason Not Done	<input type="text"/>	RPREASND
1.3	Was the subject of child bearing potential?	<input type="radio"/> No <input type="radio"/> Yes	CHILDPOT_RPORRES
1.4	Menopause Status	<input type="radio"/> Premenopausal <input type="radio"/> Postmenopausal	MENOSTAT_RPORRES

Variable Name	Variable Label	Type	Controlled Terms, CodeList or Format*	Role	CDISC Notes	Core
RPFRESN	Numeric Result/Finding in Standard Units	Num		Result Qualifier	In numeric format in RPFRESN. For example, if various tests have results "NONE", "NEG", and "NEGATIVE" in RPORRES, and these results effectively have the same meaning, they could be represented in standard format in RPFRESN as "NEGATIVE".	Perm
RPFRESU	Standard Units	Char	(UNIT)	Variable Qualifier	Standardized units used for RPFRESN and RPFRESU. Example: "mol/L".	Perm
RPSTAT	Completion Status	Char	(ND)	Record Qualifier	Used to indicate that a question was not asked or a test was not done, or a test was attempted but did not generate a result. Should be null or have a value of "NOT DONE".	Perm
RPREASND	Reason Not Done	Char		Record Qualifier	Reason not done. Used in conjunction with RPSTAT when value is "NOT DONE".	Perm
RPLOBXFL	Last Observation Before Exposure Flag	Char	(NY)	Record Qualifier	Operationally-derived indicator used to identify the last non-missing value prior to RFXSTDTCT. The value should be "Y" or null.	Perm
RPBFL	Baseline Flag	Char	(NY)	Record Qualifier	Indicator used to identify a baseline value. Should be "Y" or null. Note that RPBFL is retained for backward compatibility. The authoritative baseline for statistical analysis is in an ADaM dataset.	Perm
RPDRVFL	Derived Flag	Char	(NY)	Record Qualifier	Used to indicate a derived record. The value should be "Y" or null. Records which represent the average of other records or which do not come from the CRF are examples of records that would be derived for the submission datasets. If RPDVFL = "Y", then RPORRES may be null, with RPFRESN and (if numeric) RPFRESN having the derived value.	Perm
VISITNUM	Visit Number	Num		Timing	Clinical encounter number. Numeric version of VISIT, used for sorting.	Exp
VISIT	Visit Name	Char		Timing	Protocol-defined description of a clinical encounter.	Perm
VISITDY	Planned Study Day of Visit	Num		Timing	Planned study day of VISIT. Should be an integer.	Perm
TAETORD	Planned Order of Element within Arm	Num		Timing	Number that gives the planned order of the Element within the Arm for the Element in which the assessment was made.	Perm
EPOCH	Epoch	Char	(EPOCH)	Timing	Epoch associated with the relative at which	Perm
RPDTC	Date/Time of Collection	Char	ISO 8601	Timing	Collection date and time of an observation.	Exp
	Visit/Collection/Exam				expressed in integer days relative to the sponsor-defined RFDSTCT in Demographics.	
RPDUR	Duration	Char	ISO 8601	Timing	Collected duration of an event, intervention, or finding represented in ISO 8601 character format. Used only if collected on the CRF and not derived.	Perm
RPTPT	Planned Time Point Name	Char		Timing	Text description of time when a measurement or observation should be taken as defined in the protocol. The value is represented as in	Perm

7	MLSTDAT	What was the date the meal was consumed?	Start Date	Record the date the meal was consumed using this format (DD-MON-YYYY).	Text	MLSTDTC		N/A					
8	MLSTTIM	What was the meal start time?	Start Time	Record the time (as complete as possible) that the meal was started.	Text	MLSTDTC		N/A					
9	MLENDAT	What was the meal end date?	End Date	Record the date the meal ended using this format (DD-MON-YYYY).	Text	MLENDTC		N/A					
10	MLENTIM	What was the meal end time?	End Time	Record the time (as complete as possible) that the [meal/product] was ended.	Text	MLENDTC		N/A					

CDASHIG v2.3

aCRF Creation - SDTMIG

CE – Examples

Example 1

In this example, data were collected about prespecified events that, in the context of this study, were not reportable as AEs. The data were collected in a log independent of visits, rather than in visit-based CRF modules, so visit and date of collection (CEDTC) data were not collected.

CRF

<i>Record start dates of any of the following signs that occurred during the study.</i>		
Clinical Sign	Did it occur?	Start Date of First Episode
Rash	No	
	Yes	
Wheezing	No	
	Yes	
Edema	No	
	Yes	
Conjunctivitis	No	
	Yes	

Rows 1-3: Show 3 symptoms which occurred and their start dates.

Row 4: Shows that conjunctivitis did not occur. Because there was no event, there is no start date.

ce.xpt

Row	STUDYID	DOMAIN	USUBJID	CESEQ	CETERM	CEPRES	CEOCCUR	CESTDTC
1	ABC123	CE	123	1	Rash	Y	Y	2006-05-03
2	ABC123	CE	123	2	Wheezing	Y	Y	2006-05-03
3	ABC123	CE	123	3	Edema	Y	Y	2006-05-03
4	ABC123	CE	123	4	Conjunctivitis	Y	N	

SDTMIG v3.4

aCRF Creation – Therapeutic Area User Guides (TAUGs)

The screenshot displays the CDISC website interface. At the top right, there are links for "Sign out" and "My Account". The main navigation bar includes "New to CDISC", "Standards", "Education", "Resources", "Events", "Membership", and "Members Only". The CDISC logo is prominently displayed on the left side of the page.

The "Therapeutic Areas" section is highlighted, with a breadcrumb trail: "Home / Standards / Therapeutic Areas". Below this, a paragraph explains: "Therapeutic Area User Guides (TAUGs) extend the Foundational Standards to represent data that pertains to specific disease areas. TAUGs include disease-specific metadata, examples and guidance on implementing CDISC standards for a variety of uses, including global regulatory submissions."

A grid of Therapeutic Areas is shown below, with columns for "Acute Kidney Injury", "Diabetes", "Kidney Transplant", and "QT Studies".

Therapeutic Area	Acute Kidney Injury	Diabetes	Kidney Transplant	QT Studies
Alzheimer's		Diabetic Type 1 - Exercise and Nutrition	Lung Cancer	Rare Diseases
Asthma		Diabetic Type 1 - Pediatrics and Devices	Major Depressive Disorder	Rheumatoid Arthritis
Breast Cancer		Diabetic Type 1 - Screening, Staging and Monitoring of Pre-clinical Type 1 Diabetes	Malaria	Schizophrenia
Cardiovascular		Diabetic Kidney Disease	Multiple Sclerosis	Traditional Chinese Medicine - Acupuncture
CDAD		Duchenne Muscular Dystrophy	Nutrition	Traditional Chinese Medicine - Coronary
Crohn's Disease		Dyslipidemia	Pain	Artery Disease-Angina
		Ebola	Pancreatic Cancer	Traumatic Brain Injury
		Heart Failure	Parkinson's Disease	Tuberculosis
		Hepatitis C	Pediatrics	Vaccines
		HIV	Polycystic Kidney Disease	Virology
		Huntington's Disease	Post Traumatic Stress Disorder	
		Influenza	Prostate Cancer	
			Psoriasis	

On the right side of the screenshot, a portion of a data grid is visible, showing columns for "FINDINGS" and various standard codes (S, TU, TR, VS, QT*, WB*, RELSPEC). The grid contains several 'X' marks indicating data points.

Methods

Method	Type	Description
Algorithm to derive AEENTPT	Computation	If AEENRTPT is populated, AEENTPT is DM.RFPENDTC for the subject.
Algorithm to derive CMENTPT	Computation	If CMENRTPT is populated, CMENTPT is DM.RFPENDTC for the subject.
Algorithm to derive DAYCALC	Computation	Study day relative to RFSTDTC. Date - RFSTDTC + 1 if on or after RFSTDTC. Date - RFSTDTC if date precedes RFSTDTC.
Algorithm to derive DISEQ	Computation	Starts at "1" for first device identifier and increments by one for each DIPARM
Algorithm to derive DTHFL	Computation	If DTHDTC is populated then DTHFL='Y'
Algorithm to derive EPOCH	Computation	EPOCH from SE where date >= SESTDTC and date < SEENDTC
Algorithm to derive EXDOSE	Computation	EXDOSE = ECDOSE * ECPSTRG expressed in mg.
Algorithm to derive FTSTRESN	Computation	If FTSTRES is numeric then FTSTRESN=FTSTRES in numeric format, else null.
Algorithm to derive IEBORRES	Computation	If IECAT=INCLUSION then IEBORRES=N, else if IECAT=EXCLUSION then IEBORRES=Y
Algorithm to derive LBSTRESC	Computation	LBSTRESC is equal to LBORRES or the value in standard units if a conversion is necessary.
Algorithm to derive LOBXFL	Computation	Set to "Y" for last record with non-null original result on or before the first dose date (RFXSTDTC). Null otherwise.
Algorithm to derive QSSTRESC_PH	Computation	If QSORRES="Not at all" then 0 If QSORRES="Several days" then 1 If QSORRES="More than half the days" then 2 If QSORRES="Nearly every day" then 3
Algorithm to derive QSSTRESC_PH_10_11	Computation	QSSTRESC=QSORRES
Algorithm to derive QSSTRESC_SL	Computation	If QSORRES="Strongly disagree" then 1 If QSORRES="Disagree" then 2 If QSORRES="Slightly disagree" then 3 If QSORRES="Neither agree nor disagree" then 4 If QSORRES="Slightly agree" then 5 If QSORRES="Agree" then 6 If QSORRES="Strongly agree" then 7
Algorithm to derive QSSTRESN	Computation	If QSSTRESC is numeric then QSSTRESN=QSSTRESC in numeric format, else null.

Validation – Tips

Keep notes for each issue regarding root cause and resolution

- Helpful when working with sponsor standards
- Enable you to remember and triage rules faster

Create explanations prior to submission

- Avoids having to create explanations from scratch
- Helps to ensure all relevant details are included for clarity

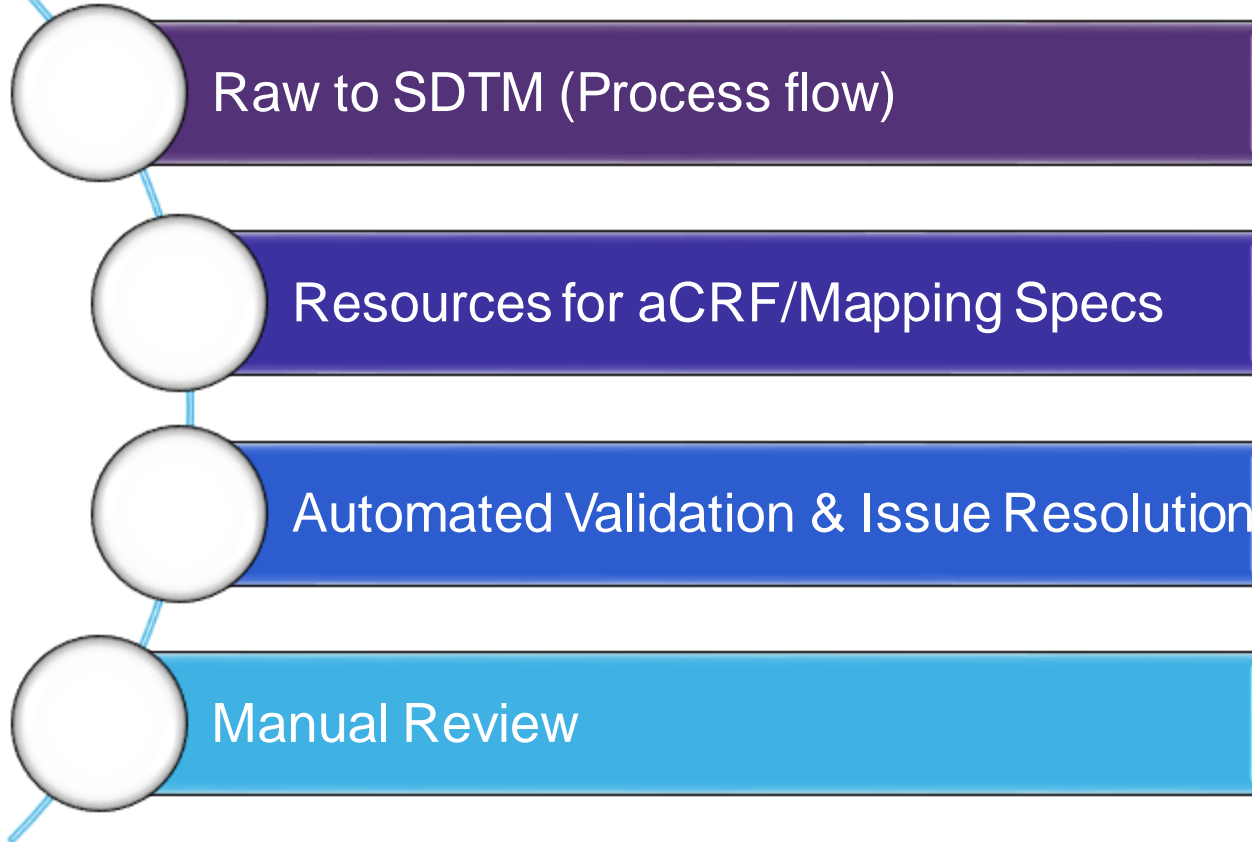

Practice prioritizing issues to fix

- Any issues regarding rejection criteria for an agency must be fixed prior to submission

Manual validation of aCRF, define.xml, and cSDRG is necessary as well as cross-checks between files and datasets

- Keep a checklist of items to check for each document

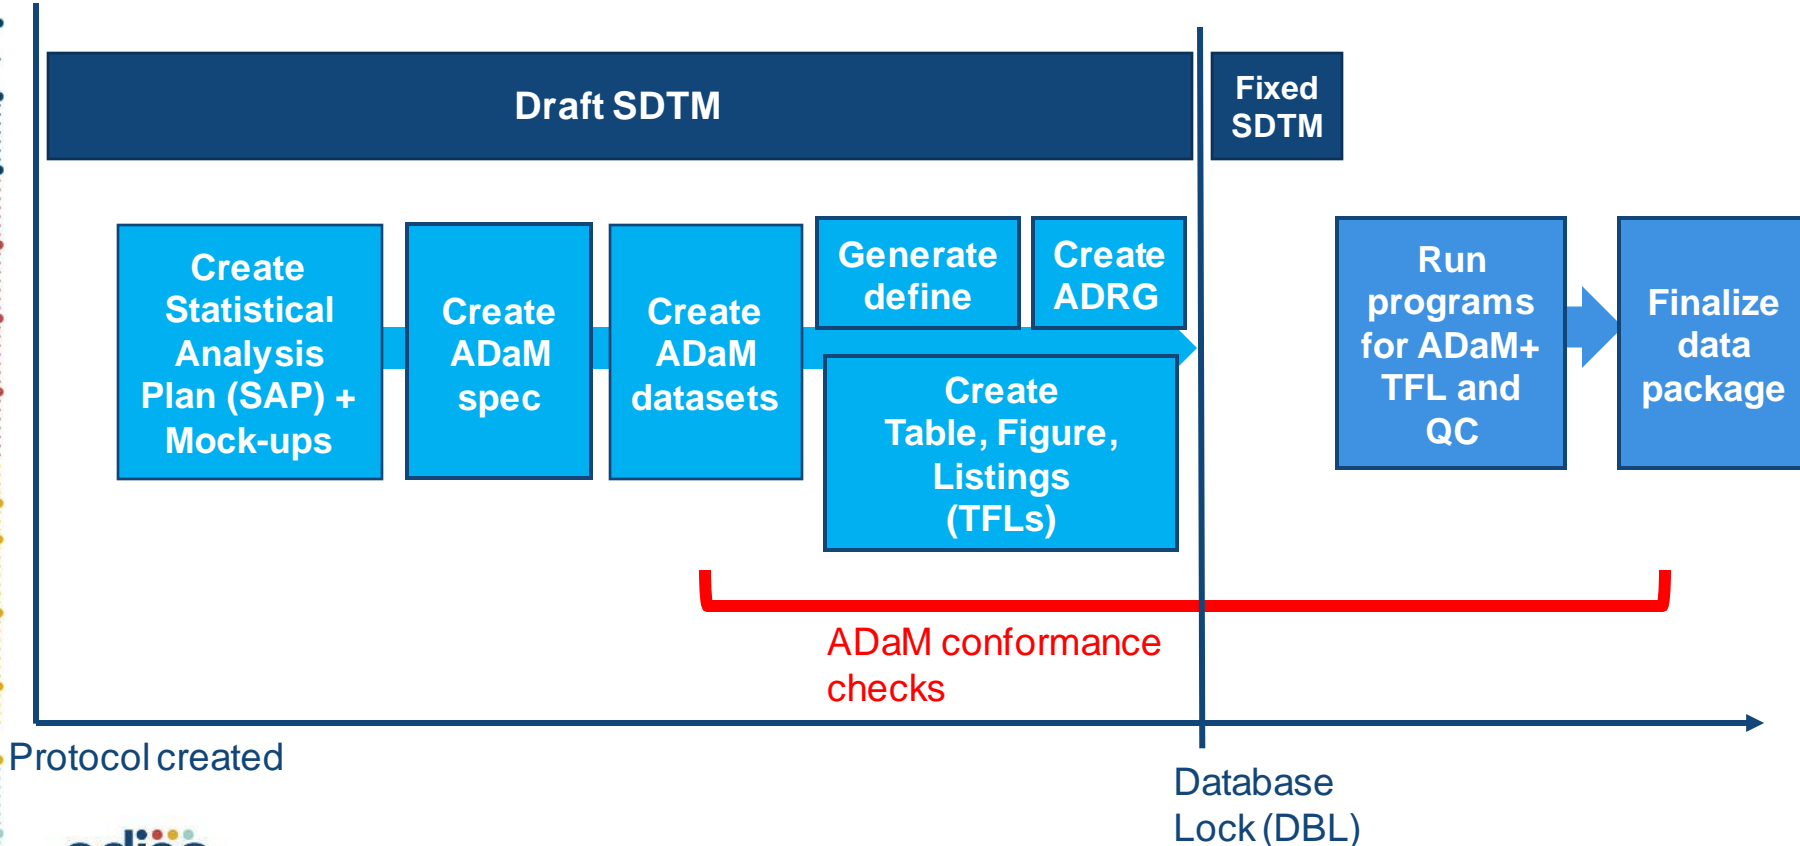

Summary

ADaM Creation

General Stat Process Flow

Cross-check Between Mock-up and SDTM

Mock-up example

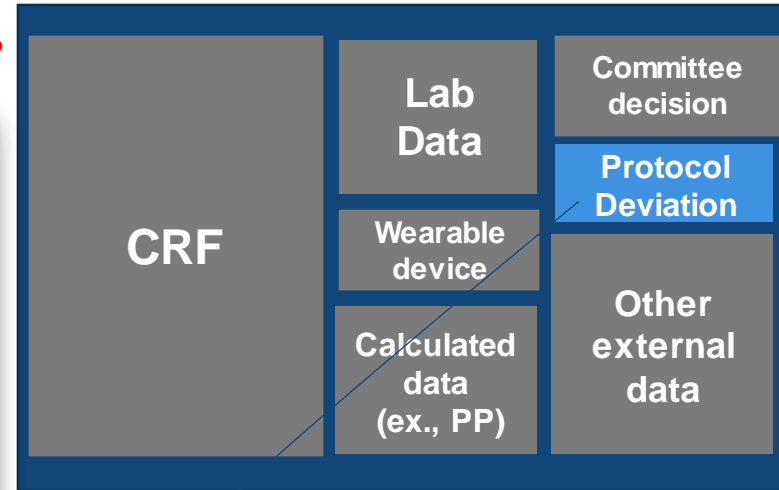

Table x Protocol Deviation

	Active (N=x)	Placebo (N=x)	Total (N=x)
ITT Population	xx	xx	xx
Major protocol deviation	xx(xxx.x)	xx(xxx.x)	xx(xxx.x)
<DVTERM>	xx(xxx.x)	xx(xxx.x)	xx(xxx.x)
<DVTERM>	xx(xxx.x)	xx(xxx.x)	xx(xxx.x)
<DVTERM>	xx(xxx.x)	xx(xxx.x)	xx(xxx.x)
<DVTERM>	xx(xxx.x)	xx(xxx.x)	xx(xxx.x)
<DVTERM>	xx(xxx.x)	xx(xxx.x)	xx(xxx.x)

How values of treatment variables stored in SDTM?

Major/minor category in the data?

SDTM

When are data going to be stored in SDTM?

Check units in SDTM

LB domain

LBTEST	LBORRES	LBORRESU	LBSTRESN	LBSTRESU	LBNAM
Calcium	4.688	mEq/L	2.3441	mmol/L	Hospital A
Calcium	4.986	mEq/L	2.4938	mmol/L	Hospital A
Calcium	9.695	mg/dL	2.4189	mmol/L	Hospital B
Calcium	9.595	mg/dL	2.394	mmol/L	Hospital B

Mock-up

Table x Summary of Laboratory Data

Calcium (mg/dL)

	Active	Placebo
Baseline		
N	x	x
Mean (SD)	x.xx (x.xxx)	x.x (x.xxx)
Median	x.xx	x.xx
Min, Max	x.xx, x.xx	x.xx, x.xx
<Visit>		
N	x	x
Mean (SD)	x.xx (x.xxx)	x.x (x.xxx)
Median	x.xx	x.xx
Min, Max	x.xx, x.xx	x.xx, x.xx

Example questions for creating ADaM for planned analyses

- Can you just keep SDTM variables and observations in ADaM?
- Do you need to derive variables and observations in ADaM?
- In what units, are data stored in SDTM? Are they matching with units to be displayed in the analysis results?
- Check SDTM Treatment variables, study periods, visits
- If some data are not ready at this moment, do you need to prepare dummy data for preparing for programs?

Basic Data Structure for ADaM popPK Implementation Guide v1.0

Identifiers				Scope of Rule			Statement of Rule			Implementational	Chid	Ident.	Chid Guidance
Rule ID	Version (represent a any change)	Related Rules	Generally (ID Version, OCCD)	Class	Subclass	Variable or Item	Natural Language Rule (Failure Criteria)	Rule (Failure Criteria)	Condition (Failure)	Guidance Document	Section	Table	
7	1		1.2	ALL		FL	A variable with a suffix of FN is present but a variable with the same root and a suffix of FL is not present	A variable is not present that has a suffix of FL and the same root as a variable with a suffix of FN	Variable with a suffix of FN is present	ADaMIG v1.2	3.1.1	1.1	ADaMIG v1.2, Section 3.1.1, Item 8: Variables whose names end in FL are character flag (or indicator) variables with at most two possible non-missing values, Y or N (i.e., yes or no). The name of the corresponding numeric flag (or indicator) variable ends in FN. If the flag is included in an ADaM dataset, the character version (FL) is required but the corresponding numeric version (FN) can also be included. If both versions of the flag are included, there must be a one-to-one relationship between the values of the two variables, as described in Section 3.1.4, Flag Variable Conventions.
7	1		1.3	ALL		FPL	A variable with a suffix of FN is present but a variable with the same root and a suffix of FL is not present	A variable is not present that has a suffix of FL and the same root as a variable with a suffix of FN	Variable with a suffix of FN is present	ADaMIG v1.3	3.1.1	8	ADaMIG v1.3, Section 3.1.1, Item 8: Variables whose names end in FL are character flag (or indicator) variables with at most two possible non-missing values, Y or N (i.e., yes or no). The name of the corresponding numeric flag (or indicator) variable ends in FN. If the flag is included in an ADaM dataset, the character version (FL) is required but the corresponding numeric version (FN) can also be included. If both versions of the flag are included, there must be a one-to-one relationship between the values of the two variables, as described in Section 3.1.4, Flag Variable Conventions.
10	1		3.0	ALL		FN	A variable with a suffix of FL is equal to Y and a variable with the same root and a suffix of FN is not equal to 1	A variable with a suffix of FN is not equal to 1	Variable with a suffix of FL is present and equal to Y, and a variable with the same root and a suffix of FN is present	ADaMIG v1.0	3	4	General Flag Variable Conventions (General Flag Variable Conventions): For subject-level character population flag variables: N = no (not included in the population), Y = yes (included); null values are not allowed.
10	1		3.1	ALL		FN	A variable with a suffix of FL is equal to Y and a variable with the same root and a suffix of FN is not equal to 1	A variable with a suffix of FN is not equal to 1	Variable with a suffix of FL is present and equal to Y, and a variable with the same root and a suffix of FN is present	ADaMIG v1.1	3.1.4	4-9	ADaMIG v1.1, Section 3.1.4, Item 4: For subject-level character population flag variables: N = no (not included in the population), Y = yes (included). Null values are not allowed. ADaMIG v1.1, Section 3.1.4, Item 9: For character flags with variable names that end in FL and that are not population flags, a scheme of Y/N/null, or Y/null may be specified. As indicated in Table 3.1.4.2 and Table 3.8.1.1, some common character flags use the scheme Y/null. Corresponding 1/0/null and L/null schemes apply to numeric flags that are not population indicators.
10	1		3.2	ALL		FN	A variable with a suffix of FL is equal to Y and a variable with the same root and a suffix of FN is not equal to 1	A variable with a suffix of FN is not equal to 1	Variable with a suffix of FL is present and equal to Y, and a variable with the same root and a suffix of FN is present	ADaMIG v1.2	3.1.4	4-9	ADaMIG v1.2, Section 3.1.4, Item 4: For subject-level character population flag variables: N = no (not included in the population), Y = yes (included). Null values are not allowed. ADaMIG v1.2, Section 3.1.4, Item 9: For character flags with variable names that end in FL and that are not population flags, a scheme of Y/N/null, or Y/null may be specified.

Refer to Data Standard Catalog

for supported data standards:

FDA: <https://www.fda.gov/media/160564/download>

PMDA: <https://www.pmda.go.jp/files/000250752.zip>

Manual checks are necessary

Automated checks can't check everything for you

Manual checks suggestions:

- Variables needed for analyses are created
- Conditionally required variables are created
- Custom variables are following ADaM rules
- Keep consistency in submission documents

Manual check examples

1. Variables needed for analyses are created

Population Flags in SAP vs ADaM+Define

SAP

4. Analysis Sets

4.1 Full Analysis set

Full analysis set is defined as all subjects who received at least one dose of Drug X.....

4.2 Safety Analysis set

Safety analysis set is defined as

ADSL

USUBJID	FASFL	SAFFL	XYZFL ^{??}
01-01-0000	Y	Y	Y
01-01-0001	Y	Y	Y
01-01-0002	Y	Y	Y
01-01-0003	Y	N	Y
01-01-0004	N	N	Y

FASFL	Full Analysis Set Population Flag	text	1	No Yes Response <ul style="list-style-type: none"> "N" = "No" "Y" = "Yes" 	Derived Set to "Y" if subject received at least one dose of Drug X; else set to "N".
SAFFL	Safety Population Flag	text	1	No Yes Response <ul style="list-style-type: none"> "N" = "No" "Y" = "Yes" 	Derived Y if ITTFL='Y' and TRTSDT ne missing. N otherwise

Manual check examples

2. Conditionally required variables

When date/time imputations are done

x.1 Missing Data Handling

In general, missing data will not be imputed except missing/partial missing event adverse event (AE) start date

ADAE

USUBJID	AESEQ	AEDECOD	AESTDTC	ASTDT	TRTSDT	TRTEMFL
01-01-0000	1	Eye Swelling	2020-02	2020-02-01	2020-03-01	
01-01-0000	2	Nausea	2020-03-04	2020-03-04	2020-03-01	Y
01-01-0000	3	Cough	2020	2020-01-01	2020-03-01	

When date/time imputations are done

USUBJID	AESEQ	AEDECOD	AESTDTC	ASTDT	ASTDTF	TRTSDT	TRTEML
01-01-0000	1	Eye Swelling	2020-02	2020-02-01	D	2020-03-01	
01-01-0000	2	Nausea	2020-03-04	2020-03-04		2020-03-01	Y
01-01-0000	3	Cough	2020	2020-01-01	M	2020-03-01	

 Don't forget to add imputation flags

 Automated checks can check the values of imputation flags (Y/M/D) or (H/T/S) but not if you create imputation flags based on SAP!

Manual check examples

3. Consistency in submission documents

Updates need to be reflected until deliverables are fixed

Keep consistency between datasets and define
